Subject: Construction Completion Report
Building 1065 CAP Area
Presidio of San Francisco, California

Dear Ms. Farres:

Enclosed are hard and electronic copies of the *Construction Completion Report, Corrective Action Plan (CAP) Implementation, Building 1065 Area* dated March 10, 2009. This report documents the remedial actions conducted in accordance with the *Final CAP* (Mactec, 2007) and Water Board Order R2-2003-0800. We continue to conduct post-remediation groundwater monitoring at the site and will submit for site closure based on the data results.

If you have any questions or comments, feel free to call Ryan Seelbach at (415) 561-5082 or me at (415) 561-4259.

Sincerely,

Eileen Fanelli

Dear Mr. Seelbach:

Enclosed please find two copies of the *Construction Completion Report, Corrective Action Plan Implementation, Building 1065 Area, Presidio of San Francisco, California*, dated March 2009. We also enclose a CD of the report.

We have distributed additional copies to DTSC, Water Board, NPS, and Presidio RAB per your cover letter.

If you have questions, please contact Mary Jo Heassler at 530-271-2279 or Michael Jacobvitz at 707-793-3853.

Sincerely,

EXECUTIVE SUMMARY

This report was prepared by MACTEC Engineering and Consulting, Inc. (MACTEC) on behalf of the Presidio Trust (Trust) to document corrective actions at the Building 1065 Area (the Site) as described in the *Final Corrective Action Plan, Building 1065 Area, Presidio of San Francisco, California* (CAP), dated January 24, 2007 (*MACTEC, 2007a*), and *Addendum to the Final Corrective Action Plan,* (*Trust, 2008*). The corrective action was implemented to address soil and groundwater contamination that was related to or co-located with releases of petroleum hydrocarbons from past uses of the Site.

In the CAP, three remedial units (RUs) -A, -B, and -C were identified at the Site based on the presence and concentrations of chemicals of concern (COCs) in soil and groundwater. The CAP selected alternative included the following major elements: 1) excavation and offsite disposal of impacted soil at one remedial unit (RU)-A, 2) groundwater monitoring, 3) outdoor cap inspection at a second remedial unit RU-C, 4) indoor air and cap assessment at RU-C, 5) land use controls (LUCs), and 6) a five year review. Remedial action associated with fill material at RU-B was not addressed in the CAP and will be addressed under the remedial action plan for Fill Site 6B. At RU-A, soil was removed from three excavations numbered 1 through 3. The excavation identification was based on excavation areas identified in the work plan, and the excavations were not completed in numerical order.

Corrective action activities were conducted at the Site between October 15, 2007 and June 10, 2008. The corrective action was performed in general accordance with the *Technical Specifications and Drawings, Corrective Action Plan Implementation* (Technical Specifications; *MACTEC, 2007b*), the *Final Corrective Action Implementation Work Plan* (Work Plan) (*MACTEC, 2007c*), and the *Petroleum Contingency Plan* (*EKI, 2004*).

At RU-A, approximately 1,840 tons of soil were excavated from Excavations 1, 2, and 3, within, north, and south of Building 1063 and disposed offsite at a Class I landfill. In addition, approximately 160 tons of soil were excavated from a trench in the parking lot west of Building 1063 and disposed offsite at a Class II landfill. Confirmation soil samples were collected from the excavations to confirm that soil containing COCs above Site cleanup levels was removed. Confirmation sampling at RU-A showed that Site cleanup levels were met except for two areas where petroleum-impacted soil was not removed because contaminated soil extended beneath bearing walls or it appeared that contaminants were related to fill material and not a release of petroleum fuels. These two areas included: 1) soil beneath the southern wall of Building 1063, and 2) on the north side of Building 1063 (adjacent to Fill Site 6B). For

these areas, the Trust proposes to implement LUCs to inform and protect future users/occupants of the Site concerning the presence of residual contaminants in soil above Site cleanup levels.

At RU-C, an indoor air and cap assessment was performed that included collecting and analyzing soil vapor samples from locations around Building 1040 and inspecting the interior of the building for visible cracks, penetrations, and gaps that could potentially allow for direct contact with COCs in soil under the building. Results of the assessment indicated that 1) risks associated with residual petroleum hydrocarbons and related constituents in soil gas at RU-C are within acceptable risk ranges, 2) the floor and basement wall in the vicinity of residual petroleum hydrocarbons in soil provide a barrier to prevent direct contact with the underlying soil, and 3) no further action with regard to vapor intrusion mitigation was recommended.

For the areas of the site (including RU-C) where LUCs will be implemented, an outdoor cap inspection was performed to examine and document the existing surface outside the footprint of Building 1040 as well as document conditions in two other areas of the site where concentrations of COCs above Site cleanup levels remain in soil. No further surface improvements were recommended; however, it was recommended that the LUC Zones at the Site be inspected annually and inspections documented and information managed under the Presidio Trust LUC Program.

A new monitoring well was installed downgradient of RU-A and groundwater monitoring was performed in the new well and pre-existing wells and piezometers prior to and following excavation at RU-A. Analytical results for groundwater samples collected following excavation exhibited little change from the values reported from the groundwater samples collected prior to excavation. Samples collected from wells downgradient of RU-A did not show detectable concentrations of the groundwater COCs total petroleum hydrocarbons as gasoline (TPHg) and benzene. Arsenic was detected above the 10 micrograms per liter (µg/L) Site cleanup level in two downgradient wells 1065MW101A (at 32 µg/L) and 1065MW102A (at 11 µg/L), but was detected below the Site cleanup level in downgradient well 1065MW103A (concentration of 5.8 µg/L).

Based on results of excavation confirmation soil sampling, indoor and outdoor cap inspections, soil gas sampling, pre-and post groundwater monitoring, and the planned land use controls, the corrective action implementation meets remedial action objectives identified in the CAP.

In accordance with the CAP, groundwater monitoring will be performed quarterly for one year for TPHg, benzene, toluene, ethylbenzene, and xylenes (BTEX), arsenic, and redox parameters; semi-annually

thereafter for TPHg and BTEX; and annually thereafter for arsenic and redox parameters. After TPHg, BTEX, and arsenic are demonstrated to be below Site cleanup levels for four consecutive sampling rounds, monitoring will be discontinued (subject to California Regional Water Quality Control Board [Water Board] approval), and clean closure with regard to groundwater contamination will be documented in a site closure request. In accordance with the Water Board Order, a Five-Year Status Report, which evaluates the effectiveness of this CAP for groundwater, will be completed and submitted to the Water Board for approval.

Prior to occupation of Building 1063, the Trust will conduct a soil vapor assessment to evaluate potential human health risks from vapor intrusion to indoor air from residual contaminants in soil. If results of the soil vapor assessment show risks to future building occupants, the Trust will consult with the Water Board and stakeholders concerning alternatives for mitigation and/or remediation of the contaminated soil left in place.

1.0 INTRODUCTION

1.1 Purpose of Report

This Construction Completion Report for Corrective Action Plan Implementation at the Building 1065 Area (Completion Report) has been prepared by MACTEC Engineering and Consulting, Inc. (MACTEC) on behalf of the Presidio Trust (Trust) to document work performed and results of the corrective action program at the Building 1065 Area, Presidio of San Francisco, California (the Site). Remedial work was performed between October 15, 2007 and June 10, 2008 in general accordance with the *Final Corrective Action Plan, Building 1065 Area* (CAP), *Addendum to the Final Corrective Action Plan*, (*Trust, 2008*), *Technical Specifications and Drawings, Corrective Action Plan Implementatio*n (Technical Specifications), the *Final Corrective Action Implementation Work Plan* (Work Plan) (*MACTEC, 2007a,b, and c*), *Presidio-Wide Quality Assurance Project Plan, Sampling and Analysis Plan* (QAPP) (*Tetra Tech, 2001*), and the *Petroleum Contingency Plan* (*EKI, 2004).*

A description of the Site, site geology and hydrology, chemicals of concern (COCs), description of remedial units (RUs), Site cleanup levels, and selected remedies are provided in the CAP and Work Plan. The location of the site is shown on Figure 1-1 and building locations and select site features are shown on Figure 1-2.

1.2 Purpose and Scope of the Corrective Action

The corrective action was implemented to address soil and groundwater contamination that was related to or co-located with releases of petroleum hydrocarbons from past uses of the Site. The remedial action objectives (RAOs) of the CAP included: 1) protection of human health and the environment; 2) cost-effective cleanup of the Site consistent with its potential land use; 3) recycling excavated materials to the extent practicable; 4) compliance with State and Federal environmental laws; 5) consistency of the selected corrective action alternatives at the Site with the overall transformation of the Presidio into a national park site; and 6) preference for permanent ("clean closure") remedies whenever practicable, cost-effective, and consistent with current or anticipated land use.

In the CAP, site-specific cleanup levels were developed and COCs were identified based on chemicals detected in soil and groundwater above site-specific cleanup levels. Cleanup levels for COCs identified in the CAP and related compounds are presented in Table 1-1. Based on the presence of COCs above Site

cleanup levels, three RUs were identified. The three RUs and recommended corrective actions to address contamination at each RU are summarized below:

1. RU-A: RU-A is located beneath, north, and south of Building 1063. RU-A comprised soil and groundwater in the vicinity of Building 1063 that was impacted by petroleum hydrocarbons, volatile organic compounds (VOCs), polycylic aromatic hydrocarbons (PAHs), and metals. As shown on Figure 1-2, RU-A is bounded to the south by the boundaries of a previous excavation that was performed in 2003 and 2004 as part of an Interim Action (IA). The recommended alternative for RU-A was excavation and offsite disposal of soil, application of in-situ oxygen release product as necessary, and groundwater monitoring until results show that petroleum-related COCs are below Site cleanup levels for four consecutive sampling rounds.

   Building 1063, constructed in 1941, is considered a historic structure of contributive value to the National Historic Landmark (NHL) and therefore, has been designated to be preserved. The building comprises a concrete slab floor, axial gable roof, roof support columns on 12-foot spacings, and walls composed of corrugated iron. The planned future use of the building is commercial.

2. RU-B: RU-B comprised an area of debris fill in the northwestern portion of the Site. Because the areal extent of COCs in shallow soil at RU-B had not been fully delineated, a corrective action alternative was not selected for RU-B in the CAP. Further investigation, evaluation, and selection of a remedial alternative will be addressed in the Remedial Action Plan (RAP) for Fill Site 6B.

3. RU-C: RU-C comprised soil impacted by petroleum hydrocarbons in the vicinity of Building 1040. The recommended alternative for Soil RU-C was capping and LUCs to inform and protect future users of the building concerning the presence of COCs in soil above Site cleanup levels.

   Building 1040 was constructed in 1920, and formerly operated as a power house/steam plant. The building is a historic structure, and is of contributive value to the NHL and therefore has been designated to be preserved.

Figure 1-2 shows the location of the three RUs identified in the CAP.

The corrective action described in this Completion Report includes: 1) excavation work performed at RU-A, 2) installation of groundwater monitoring wells at RU-A, 3) pre-excavation groundwater

monitoring, and the first round of post-excavation groundwater monitoring at the Site, 4) results of the initial outdoor cap inspection at RU-C, 5) results of the soil vapor assessment and indoor cap inspection at RU-C, and 6) LUCs for the Site as described in a site-specific addendum to the Land Use Control Master Reference Report (LUCMRR; *Trust, 2006*).

1.3 Roles and Responsibilities

Key project team members included the Trust as the Construction Manager; MACTEC which provided field oversight and collected confirmation samples during excavation, performed the outdoor cap inspection, documented remedial work performed in accordance with the CAP, and prepared the LUCMRR Addendum; Engineering/Remediation Resources Group, Inc. (ERRG) which served as the Remediation Contractor; Treadwell and Rollo, Inc (T&R) which abandoned, installed, developed, and sampled groundwater monitoring wells; and Erler and Kalinowski, Inc. (EKI) which conducted the vapor intrusion assessment and indoor cap inspection at Building 1040. Figure 1-3 shows the project organization chart. The California Regional Water Quality Control Board (Water Board) served as the lead agency providing regulatory oversight. Other stakeholders that participated in decisions during project planning and implementation included the National Park Service (NPS), the California Department of Toxic Substances Control (DTSC), and the Restoration Advisory Board (RAB).

2.0 EXCAVATION ACTIVITIES

This section describes activities preformed as part of the excavation portion of the remedy selected for RU-A. Excavation work was performed by ERRG at the direction of the Trust and included mobilization, surveying, clearance, shoring, demolition, backfilling, stockpile profiling, soil disposal, and demobilization activities. MACTEC was onsite during excavation and collected soil confirmation samples from the excavations.

2.1 Sequence of Work

Pre-excavation activities included a pre-excavation survey on July 6, 2007 and a kickoff meeting on June 21, 2007 among the Trust, MACTEC, and ERRG (the project team) and the NPS, DTSC, and/or RAB members (stakeholders), and the Water Board,. Excavation work included removal of soil from three excavations in RU-A (Excavations 1 through 3) and removal of an abandoned sewer line from a parking area west of RU-A. The excavations were not completed in numerical order; excavation work began on October 29, 2007 with installation of shoring and excavation of soil from an area on the south side of Building 1063 (Excavation 3), including removal of a portion of an abandoned sewer line that was encountered in the west end of Excavation 3. Following completion of Excavation 3, soil was excavated from an area north of Building 1063 (Excavation 2). Excavations 2 and 3 were backfilled between December 19, 2007 and January 21, 2008, with concurrence from the Water Board and stakeholders and after the excavation limits were surveyed on December 12, 2007.

Soil was excavated from the interior of Building 1063 (Excavation 1) after the building support columns within the proposed excavation area were replaced with temporary support columns. Following completion of Excavation 1, meetings were held with the Water Board and stakeholders to evaluate options for addressing contaminated soil beneath the southern wall of Building 1063. During these meetings, it was agreed that the impacted soil would remain in place and that the Trust would implement a LUC for this portion of the Site. On March 26, 2008, the limits of Excavation 1 were surveyed. Excavation 1 was backfilled between March 27 and April 9, 2008.

Soil stockpiles were removed from the site between April 30 and May 2, 2008 and on June 16 and June 27, 2008. Between May 9 and 23, approximately 68 feet of the abandoned sewer pipeline was removed. After concurrence from the Water Board and stakeholders, the piping excavation was backfilled. A final survey was conducted of the area on August 7, 2008.

The following sections provide additional detail concerning work activities and procedures followed during excavation work at the Site. A summary of corrective action activities and the approximate start and end dates of each activity are provided in Table 2-1.

2.2 Documentation

When onsite, field activities and observations were documented by a MACTEC field representative in a Daily Field Log and by taking digital photographs. A representative selection of photographs documenting excavation work is included in Appendix A. In addition, MACTEC provided progress reports to the Trust that presented a summary of work performed during the reporting period, issues and/or scope deviations, project milestones achieved, planned work, and discussion points for the next scheduled stakeholder meeting. Progress reports are included in Appendix B.

2.3 Stakeholder Meetings

The Trust held a pre-construction meeting on June 21, 2007 to provide the Water Board and stakeholders with an overview of the approach for implementation of the excavation portion of the CAP. Following the June 21 pre-construction meeting, periodic progress meetings were also held to update the Water Board and stakeholders as to the progress of work, present and discuss excavation confirmation sampling results, and obtain Water Board and stakeholder input and concurrence concerning actions necessary to meet corrective action objectives. Following meetings, minutes were distributed to meeting attendees by electronic mail. Eleven progress meetings were held with the Water Board and stakeholders between October 30, 2007 and May 27, 2008. Table 2-2 presents a summary of discussion topics and key agreements made during the meetings.

2.4 Description of Excavation Activities

The following sections describe work activities performed during excavation work.

2.4.1 Surveying

A pre-excavation survey of the Site was conducted on July 6, 2007. A second survey was conducted on December 12, 2007 after Excavations 2 and 3 had been completed, and a third survey was conducted on March 26, 2008 after completion of Excavation 1. After the three excavations were backfilled and the site restored in accordance with specifications, a post-construction survey was performed on August 7, 2008. Surveying was performed by PLS Surveys, Inc. of Oakland under subcontract to ERRG; survey data are provided in Appendix C.

2.4.2 Mobilization and Clearance Work

Prior to start of excavation work, ERRG marked the excavation areas in white paint and contacted Underground Service Alert and the Trust Utilities Department to clear excavation areas for underground utilities. Mobilization began the week of October 15, 2007 when a Conex box, 20,000-gallon storage tank, and fence materials were delivered to the site.

Building 1063 is a historical structure and corrective action implementation inside the building required review and compliance with the Trust's process for implementing both the requirements of the National Environmental Policy Act (NEPA) and the National Historic Preservation Act (NHPA). The Trust's NEPA and NHPA review processes are combined into a single review commonly referred to as "N Squared." N Squared approved removal of 16 roof support columns to allow access to contaminated soil beneath the building floor slab.

2.4.3 Shoring and Demolition

During the week of October 15, 2007, ERRG saw-cut and removed asphalt from Excavation Areas 2 and 3, and saw cut and removed concrete around the roof support columns within the planned boundaries of Excavation 1.

Because of the proximity of Excavation 3 to the foundation of Building 1063, ERRG used a fixed shoring system to support the north and south walls of Excavation 3. The shoring consisted of four 20-foot sections of steel trench-box with 15-foot spreaders (see photographs, Appendix A). The size of the spreaders necessitated that the width of the excavation (north to south) be increased from the planned width of 10 to 12 feet to approximately 17 feet. Soil was initially excavated to approximately 4 feet below ground surface (bgs), after which the shoring sections were installed. ERRG pushed each shoring section downward as soil was excavated. Gravel was placed between the outside of the shoring sections and the excavation sidewalls to prevent potential collapse of the sidewalls and to preserve the structural integrity of the building foundation.

ERRG installed a shoring system to support the roof of Building 1063 at the location of Excavation 1. Shoring system construction comprised temporarily shoring the roof and replacing the lower portion of the roof support columns within the excavation boundaries with columns whose footings extended below the anticipated depth of excavation. Prior to column replacement, the fire-suppression sprinkler system was re-routed and the mezzanine in the northern part of the building was removed. The sprinkler system

was rerouted by Pribuss Systems on January 4 and 7, 2008, and a 50-foot section of mezzanine over the excavation area was removed on January 8 and 9, 2008.

Between January 9, 2008 and March 3, 2008, ERRG shored, removed, and replaced 16 roof support columns. After the excavation work was completed and Excavation 1 was backfilled, ERRG temporarily shored the roof, removed the temporary support columns, poured new roof support foundations at grade, and replaced the support columns with new, permanent support columns. This work occurred between April 7, 2008 and May 6, 2008.

The Work Plan indicated that a buttress system would be installed to support the north and south walls of the building along the lengths of Excavations 2 and 3. No buttress system was installed because 1) contamination did not extend beneath the north wall of the building, and 2) the Trust, Water Board, and stakeholders agreed that because of significant costs for installation of the buttress system, contaminated soil would not be excavated from beneath the south building wall. The rationale for the decision is further discussed in Section 2.4.5.4.

2.4.4 Excavation Dewatering and Wastewater Disposal

The boreholes for the roof support columns were dewatered prior to pouring concrete for the column footings by inserting a centrifugal pump into the borehole and pumping the water into a 20,000-gallon holding tank. In addition, Excavation 3 was dewatered during excavation and prior to backfilling. Dewatering was necessary in Excavation 3 because once the excavation intersected gravel backfill from the Phase I Interim Action (IA) excavation to the south (Figure 2-1), water flowed into Excavation 3 and stabilized at approximately 4 feet bgs. To dewater Excavation 3, a sump (approximately 4 to 6 feet wide and 2 to 3 feet deep) was dug on the western end of the excavation. Water was pumped out of the excavation using a combination of a centrifugal pump and/or gas powered sump pump. To filter out gravel and debris fragments, the water was initially pumped through a small screen (for the sump pump) or bucket with holes (for the centrifugal pump). Water was then pumped through a sock filter to remove smaller particulate material before pumping to the holding tank.

Water stored in the holding was sampled by MACTEC on October 31, 2007, and analyzed to show that it met limits prescribed in the Trust's Industrial User Class II Waste Water Permit. Water samples collected from the holding tank were analyzed by Curtis & Tompkins Ltd. for the following compounds:

- Arsenic, cadmium, chromium, copper, lead, nickel, silver, zinc, and mercury - EPA Test Method 200.7 and 245.1;
- Oil & Grease - EPA Test Method 1664S;
- Total Recoverable Petroleum Hydrocarbons (TRPH) - EPA Test Method 1664T;
- Phenols - EPA Test Method 420.1;
- pH - EPA Test Method 150.01; and
- Cyanide & Dissolved Sulfides - Standard Method (SM) 4500Cn-E and SM 4500S2-D.

It is noted that some test methods are not as specified in the QAPP (*TetraTech, 2001*), but follow the EPA 40CFR Methods Update Rule.

Based on the sample results (Table 2-3), on November 6, 2007, the Trust authorized ERRG to discharge the water to an onsite sanitary sewer. The water passed through an in-line totalizer and was gravity discharged to the sanitary sewer. Photographs of the sump area in Excavation 3 and the sanitary sewer discharge point are included in Appendix A. Based on totalizer readings, 90,044 gallons were discharged into the sanitary sewer between November 6, 2007 and March 21, 2008, when the holding tank was removed from the site. Laboratory analytical reports for the sample are included in Appendix D.

2.4.5 Excavation and Confirmation Soil Sampling

Soil was excavated from four areas of the Site during the time periods described below:

- **Excavation 3** - Soil was excavated between October 27, 2007 and November 8, 2007 with over-excavation of the west sidewall on November 14, 2007.
- **Excavation 2** - Soil was excavated on November 12, 2007, with over-excavation of the north, west, and east sidewalls on November 21, 2007.
- **Excavation 1** - Soil was excavated between March 3 and 20, 2008 with over-excavation work performed on March 26, 2008.
- **Abandoned Sewer Line** - The 12-inch inner diameter (ID) pipe that exited the western end of Excavation 3 was removed on October 31, 2007, and May 9 and 13, 2008.

Confirmation soil samples and associated Quality Control (QC) samples were collected in accordance with the Work Plan and QAPP. The samples were analyzed by Curtis and Tompkins, Ltd in accordance with the analytical program specified in the Work Plan. Table 2-4 presents a summary of analyses requested for the samples collected during the CAP implementation program. The following describes, in chronological order, activities associated with removal of soil from the three excavations and the former sewer line trench.

2.4.5.1 Excavation 3 (October 27, 2007 through November 14, 2007)

On October 29, 2007, ERRG began excavating soil from Excavation 3. An approximate 84- by 17-foot area was initially excavated to approximately 4 feet bgs prior to installation of shoring. During excavation of the upper 4 feet of soil, storm drains along the southern wall of Building 1063 were removed. In addition, an approximate 12-inch diameter, 18.5-foot long steel conductor casing from an abandoned well was encountered and removed from the approximate center of the excavation. On October 31, 2007, the hole created by the conductor casing was backfilled with a cement slurry (using a tremmie-pipe) from approximately 18 to 4 feet bgs (the approximate depth of the excavation bottom).

In addition to the conductor casing, a 4-foot deep vault (likely a sump) was encountered on the western end of Excavation 3. The upper 1 foot of the vault was constructed of concrete, the bottom 3 feet constructed of brick, and the vault was covered by a metal plate. The sump had three pipes entering it from the west and one pipe exiting on the east (Figure 2-2; West Sidewall, Excavation 3).

The three pipes located on the west side of the vault are described below:

1. An 8-inch diameter clay pipe that was encountered at approximately 2 feet bgs. The 8-inch clay pipe was 3 feet long, contained black sediment, and was open to the excavation at its west end. This pipe was removed on October 31, 2007.

2. A 4-inch diameter metal pipe that entered the sump at 2 feet bgs. This pipe was 6 feet long, rusty, had many holes, contained black sediment, and was open at the west end. This pipe was removed on October 31, 2007.

3. A 12-inch diameter clay pipe that entered the sump between 4 and 5 feet bgs. This pipe was filled with a black sediment and extended west beneath a parking area. Based on visual/olfactory evidence, it did not appear that the pipe had released contaminants into the surrounding soil. On October 31, 2007, approximately 35 feet of the 12-inch diameter clay pipe was removed from an

approximate 5-foot deep excavation. Excavation of the clay pipe was stopped because equipment and stockpiles were staged at the western extension of the 12-inch pipe. As discussed in Section 2.4.5.5, following removal of the soil stockpiles, ERRG removed an additional 68 feet of the 12-inch clay pipe.

On December 19, 2007, a sediment sample was collected from material contained in the 12-inch diameter clay pipe (1065SD100, Tables 2-5 through 2-8) and the pipe was capped off with concrete. Analytical results showed that sediment in the pipe contained contaminants above Site cleanup levels.

The fourth pipe which entered the vault from the east was an 8-inch diameter clay pipe and traversed the excavation to the southeast ending at a former excavation boundary. This pipe was removed on October 31, 2007.

After placement of shoring (discussed in Section 2.4.3), ERRG excavated soil to depths ranging from 6 to 8 feet bgs from Excavation 3. Excavation work was monitored by MACTEC on October 29 to 31, November 1, November 5 through 8, and November 14, 2007 and soil was excavated based on visual observations and PID readings. Between October 30 and November 14, 2007, MACTEC collected confirmation soil samples 1065EX350 through 1065EX361 from sidewalls at the approximate depth of groundwater (4 to 4.5 feet bgs) and confirmation samples 1065EX362 through 1065EX365 from the bottom of the excavation (Figure 2-2). Samples were analyzed for Site COCs as detailed in Table 2-4. Laboratory analytical reports are included in Appendix D. Figures 2-2 and 2-3 show logs of the excavation sidewalls.

Review of analytical results showed that four sidewall confirmation soil samples 1065EX350, -352, -355, and -360 contained TPH diesel, fuel oil, gasoline, and/or lead at concentrations exceeding Site cleanup levels as summarized below:

- 1065EX350 - TPH diesel at 130 milligrams per kilogram (mg/kg), TPH gasoline at 1,900 and 2,200 (duplicate sample), and lead at 510 mg/kg.
- 1065EX352 - TPH diesel at 360 mg/kg, TPH fuel oil at 570 mg/kg, and TPH gasoline at 1,100 mg/kg.
- 1065EX355 - TPH gasoline at 1,100 mg/kg.

- 1065EX360 - TPH fuel oil at 360 mg/kg (duplicate sample).

Sample locations are shown on Figure 2-2 and analytical results summarized on Tables 2-9 through 2-12. Analytical results were discussed with stakeholders in a meeting on November 20, 2007. Because three of the samples (samples 1065EX350, -352, and-355) were located adjacent to the south wall of Building 1063, it was planned that soil in that area would be dug out as part of Excavation 1, when shoring was planned to be installed beneath the southern wall of Building 1063.

As discussed in Section 2.5.4.5.4, in March and April 2008, the Trust re-evaluated alternatives for addressing soil contamination beneath the southern wall of Building 1063 and with the concurrence of the Water Board and stakeholders, decided not to install the shoring or remove contaminated soil from that location.

On November 14, 2007, the west sidewall of Excavation 3 was over-excavated at the location of 1065EX360 where the duplicate sample (DUP110107) contained TPH as fuel oil at 400 mg/kg, exceeding the Site cleanup level of 160 mg/kg. Following over-excavation, a second soil confirmation sample (1065EX367) was collected from the west sidewall and analyzed for Site COCs (Table 2-4). Analytical results showed that TPH fuel oil was detected at 5.6 mg/kg, indicating that soil containing TPH above Site cleanup levels had been removed from the western portion of Excavation 3. Based on results of Sample 1065EX367 and the plan to excavate impacted soil adjacent to and beneath the south wall of Building 1063 during work at Excavation 1, excavation activities at Excavation 3 were terminated.

Based on the final dimensions of the excavation, an estimated 415 yards of soil was removed from Excavation 3.

2.4.5.2 Excavation 2 (November 12, 2007 through November 21, 2007)

ERRG began Excavation 2 on November 12, 2007 by excavating a 9- by 11-foot area to approximately 7 feet bgs. The southern sidewall was sloped to protect the north wall of Building 1063; as a result, the dimensions of the bottom of the excavation were 9- by 8-feet. Two metal pipes (one 0.75- and one 1-inch diameter) were encountered during excavation. These pipes had at least one end open to the soil indicating that they were no longer in use. Groundwater was not encountered during excavation. A log of the west sidewall of Excavation 2 is shown on Figure 2-2.

Following excavation on November 12, 2007, MACTEC collected confirmation soil samples 1065EX342 through 1065EX345 from the excavation sidewalls at approximately 5 feet bgs (the top of the smear zone;

based on soil stratigraphy in the excavation and historic groundwater levels in 1065PZ1A) and one bottom sample (1065EX341) from the approximate center of the excavation (Figure 2-2). Samples were analyzed for Site COCs (Table 2-4). Analytical laboratory reports are included in Appendix D.

Review of sample results showed that sidewall sample (1065EX342) contained TPH as fuel oil at 360 mg/kg, above the Site cleanup level of 160 mg/kg, and sidewall samples 1065EX342, 1065EX344, and 1065EX345 contained benzo(a)pyrene at concentrations ranging from 0.043 to 0.074, exceeding the Site cleanup level of 0.04 mg/kg (for petroleum-related contamination) (Tables 2-9 through 2-12).

Preliminary confirmation sample results were presented to the Water Board and stakeholders in a meeting on November 20, 2007. During the meeting, it was discussed that Excavation 2 was located near the investigation area for Fill Site 6B and that sampling to date at Fill Site 6B showed similar COCs and concentrations to those detected in the samples from Excavation 2. In the meeting, it was agreed that the north, west, and east sidewalls of Excavation 2 would be over-excavated and confirmation samples would be analyzed for a limited suite of COCs to include TPH fuel oil, TPH diesel, and PAHs. It was also agreed if this one round of over-excavation did not remove soil containing PAHs above Site cleanup levels, then the Trust would consider addressing residual contaminants in the area as part of Fill Site 6B.

On November 21, 2007, Excavation 3 was expanded 2.5 feet to the west and 1.5 feet to the north and east such that the excavation limits were 13 by 12.5 feet (Figure 2-2). Following over-excavation, confirmation soil samples 1065EX346, 1065EX347, and 1065EX348 were collected at approximately 5 feet bgs from the east, north, and west sidewalls. Samples were analyzed for TPH fuel oil, TPH diesel, and PAHs (Table 2-4). Analytical results for these three samples showed that the soil sample from the western sidewall (1065EX348) contained benzo(a)pyrene at 0.18 mg/kg, exceeding the Site cleanup level of 0.04 mg/kg (Table 2-10). No other sample results showed detected concentrations above cleanup levels. Based on the location of the sample (on the Fill Site 6B investigation boundary) and the absence of TPH at concentrations exceeding Site cleanup levels, as agreed with the Water Board and stakeholders in the November 20, 2007 meeting, no further excavation was performed. As discussed in Section 6.0, the Trust proposes to implement a LUC for this area. Based on the final excavation limits, approximately 37 yards were removed from Excavation 2.

2.4.5.3 Excavation 1 (March 3 through 26, 2008)

ERRG began excavation inside of Building 1063 (Excavation 1) on March 3, 2008. Excavation work proceeded by excavating 4- to 8- foot wide areas within planned excavation limits (e.g., within the saw-cut area where columns had been cut and replaced) beginning in the northern portion of the building and working south. Groundwater was encountered between 7 and 7.5 feet bgs.

Petroleum odor was noted and visibly impacted soil was observed between 4 and 6 ft bgs when ERRG was excavating footings for the northernmost column supports inside Building 1063. To assess the potential maximum depth of contamination at the northern limits of Area 1 and the depth at which the column supports should be installed so that there would be no limitations as to removal of contaminated soil at depth, soil samples 1065EX301 and 1065EX302 were collected at 8.5 feet bgs from the boreholes for the center two replacement columns. Samples were analyzed for a limited suite of COCs including TPH diesel, TPH gasoline, TPH fuel oil, BTEX, arsenic, and lead.

Laboratory analysis of the two soil samples indicated that concentrations of TPH diesel, TPH fuel oil, TPH gasoline, BTEX, arsenic, and lead were below Site cleanup levels (Tables 2-9, 2-11, and 2-12) and therefore, it appeared that contamination in northern portion of Excavation 1 did not extend to Bay Mud (encountered in the northern column rows at approximately 9 feet bgs). Based on analytical results, it appeared that excavation to Bay Mud would not be required in the northern portion of the excavation. It also appeared that the depth of the column supports (10 feet bgs) was adequate for the planned excavation.

During excavation of one of the footings in the northernmost row of roof support columns, an approximate 4-inch diameter clay pipe was encountered at approximately 7 ft bgs. Petroleum odor (aged gasoline) was noted in the soil by ERRG; however, it was not determined whether it was related to the piping (which was excavated). The pipe was believed to be an abandoned storm sewer line because it conveyed water into the excavation during rainfall events. The pipe was replaced with a Schedule 40 PVC pipe prior to backfill.

Excavation work was monitored by MACTEC on January 22, and March 5 through 7, 10 through 14, 17 through 19, and 26, 2008, and soil was excavated to depths of 6 to 8.5 feet bgs based on visual observations and PID readings. Soil was excavated to the planned north, west, and south excavation limits. The eastern sidewall was approximately 6 feet west of the planned excavation limits because there were no elevated PID readings or visual/olfactory evidence of contamination in soil in the eastern

sidewall. The north, east, and west sidewalls were sloped and the southern sidewall was excavated with a shear wall approximately 3 feet north of the southern building wall. This area was excavated by digging 8-foot long and approximately 3- to 4-foot wide trench sections and backfilling the trenches with compacted aggregate base (AB) before moving on to the next section. The southern sidewall was then excavated (as a sloped section) into the placed AB which provided support for the sidewall.

On March 6 and 19, 2008, MACTEC collected initial confirmation soil samples 1065EX305 through 1065EX310, 1065EX313, and 1065EX314 from northern, western, and eastern sidewalls; at depths of 6 to 7 feet bgs which corresponded to the smear zone (groundwater was encountered in the excavation between 7 and 7.5 feet bgs). No confirmation soil samples were collected from the southern sidewall because Excavation 3 sidewall samples 1065EX350, 1065EX352, and 1065EX355 were considered to be representative of COC concentrations in the southern sidewall of Excavation 1. Confirmation soil samples 1065EX303, 1065EX304, 1065EX311, and 1065EX312 were collected from the excavation bottom on March 6 and 19, 2008. Confirmation soil sample 1065EX304 was collected at the location of the former 4-inch diameter clay pipe. Sample locations are shown on Figure 2-2 and Tables 2-9 through 2-12 summarize sample analytical results. Laboratory analytical reports are included in Appendix D.

The two samples collected from the east sidewall (1065EX313 and 1065EX314) contained TPH gasoline and TPH diesel at concentrations exceeding Site cleanup levels as summarized below:

- 1065EX313 - TPH gasoline at 2,200 mg/kg and TPH diesel at 200 mg/kg.
- 1065EX314 - TPH diesel at 180 mg/kg.

Analytical results are summarized on Tables 2-9 through 2-12. Confirmation sampling data were discussed during a stakeholder meeting and it was agreed that the eastern sidewall would be over-excavated at the location of 1065EX314. Because sample 1065EX313 was collected adjacent to a shear wall near the southern building wall, soil could not be further excavated without damage to the building structure. Following over-excavation on March 26, 2008, a sidewall sample (1065EX315) was collected along the enlarged sidewall and analyzed for Site COCs (Table 2-4). Analytical results showed chemical concentrations below Site cleanup levels: accordingly, over-excavation successfully removed impacted soil from the sidewall. As discussed in Section 2.4.5.4 below, the Trust evaluated alternatives for addressing contaminated soil beneath the south wall of Building 1063 including soil at the location of soil sample 1065EX313. As discussed in Section 2.4.5.4, the Water Board and stakeholders agreed that soil

beneath the south building wall (Figure 2-2) will remain in place and the Trust will implement a LUC for this area of the site. The LUC for this area is discussed in Section 6.0 and Appendix M.

Soil encountered during excavation was consistent with that encountered in Excavation 3; a log of the excavation sidewall is provided on Figure 2-21. Excavation work was completed on March 30, 2008 and based on the final dimensions of the excavation, approximately 700 yards of soil were removed from Excavation 1.

2.4.5.4 Evaluation of Alternatives to Remediate Contamination Beneath Southern Wall of Building 1063

Based on analytical results for samples 1065EX313, 1065EX350, 1065EX352, and 1065EX355, soil at and beneath the south wall of Building 1063 contains TPH at concentrations exceeding cleanup levels protective of groundwater quality and lead at concentrations above human health criteria. Petroleum contaminants in soil could also pose human health risks from vapor intrusion into indoor air. Contamination beneath the building wall could not be removed without installation of shoring after Excavation 1 was backfilled.

During stakeholder meetings on March 25 and April 8, 2008, alternatives for addressing contamination beneath the south wall of building 1063 were discussed. Potential alternatives discussed included:

- No Action - Leave contaminated soil in place and implement a LUC. This alternative would require an indoor air assessment, and may also require that engineering measures be implemented during building construction to reduce the potential for petroleum vapors.
- Excavation - Install shoring, excavate the majority of contamination beneath the building wall, and treat contaminated soil left in place at the southeast corner of Excavation 1 with oxygen releasing compound (ORC) or RegenOx™ insitu.
- ORC Advanced™ Injection - Treat TPH left in place beneath the building wall by injection of ORC Advanced™ using direct push injection angle borings.
- ORC Advanced™ Trench Application - Treat TPH left in place using ORC Advanced™ placed in a trench along the south side of the wall.
- RegenOx™ Injection - Treat TPH left in place through injection of RegenOx™ using direct push injection angle borings.

- RegenOx™ Trench Application - Treat contaminants left in place using RegenOx™ placed in a trench along the south side of the building wall.

The table presenting the comparison of alternatives discussed in the April 8, 2008 stakeholder meeting is presented in Appendix E. Based on evaluation of alternatives and relative costs and because groundwater samples collected from downgradient wells do not show petroleum constituents above Site cleanup levels, it was agreed during the meeting that contamination beneath the building wall would be left in place. Prior to occupation of Building 1063, the Trust will conduct a soil vapor assessment to evaluate potential human health risks from vapor intrusion to indoor air from residual contaminants in soil. If results of the soil vapor assessment show risks to future building occupants, the Water Board and stakeholders will be consulted concerning alternatives for mitigation and/or remediation of the contaminated soil left in place. In addition, it was agreed that the Trust would continue groundwater monitoring as outlined in the CAP and Work Plan. As discussed in Section 6.0, the Trust will implement a LUC for this area that is described in an addendum to the LUCMRR (Appendix M).

2.4.5.5 Removal of Former Sewer Line (May 9 and 13, 2008)

After Excavations 1 through 3 were completed and the soil stockpiles had been removed from the Site, ERRG excavated and removed the 12-inch ID clay pipe that had been capped off on the western end of Excavation 3. Between May 9 and 13, 2008, approximately 68 feet of pipe was removed from an approximately 2-foot wide and 8-foot deep trench. Excavation was terminated when an inactive brick utility vault with an iron cover was encountered at approximately 1 foot bgs. There were two clay pipes (18-inch and 10-inch ID) that entered the utility vault from the west and southeast at 7.0 and 6.5 feet bgs, respectively. Black sediment observed in the pipe leading west from Excavation 3 was not evident in the other pipes. ERRG excavated and removed the vault and an additional 6 to 10 feet of pipe on opposite sides of the vault; no black sediment was observed in the pipes. The ends of each pipe were sealed with concrete plugs.

On May 9, 2008, MACTEC collected confirmation soil samples 1065EX368 through 1065EX370 from the bottom of the trench at the former pipe location and collected 1065EX371 on May 13, 2008, where the 12-inch ID clay pipe entered the abandoned storm drain manhole (Figure 2-2). Analytical results showed that COCs were not detected above cleanup levels (Tables 2-9 through 2-12).

Laboratory analytical reports are included in Appendix D. Based on the final trench dimensions, approximately 63 yards of soil was removed from the pipe excavation.

2.4.6 Excavation Backfilling

In October 2007, MACTEC obtained samples from backfill source material identified by ERRG. The first set of samples consisted of ¾-inch drain rock (Sample 1065BC400) and Class II aggregate base (AB; Sample 1065BC401) from Dutra Quarry in San Rafael, California. Samples were analyzed by Curtis and Tompkins, Ltd. for Site COCs. Analytical results showed that TPH diesel, fuel oil, gasoline, PAH, VOC, and metals were not detected or were detected at concentrations below cleanup levels. The second sample comprised Class II AB obtained from A.R. Wilson Quarry in Aromas, California on January 11, 2008. This sample was analyzed for TPH gasoline, TPH fuel oil, TPH diesel, BTEX, Title 22 metals, pesticides, and herbicides. Analytical results showed that metals TPH diesel, TPH fuel oil and xylenes were below cleanup levels and benzene, toluene, ethylbenzene, TPH gasoline, pesticides, and herbicides were not detected. Sample results are presented on Tables 2-13 through 2-17.

Confirmation soil sample results for Excavations 2 and 3 were presented to the Trust, NPS, DTSC, and Water Board and approval was given to ERRG to backfill the two excavations on December 7, 2007. Backfill began on December 19, 2007, when ERRG laid filter fabric on the northern sidewall of Excavation 3 to demark the boundary between backfill material and non-excavated soil under the foundation of Building 1063. Filter fabric was also placed in the bottom of Excavation 2 (*T. Appel, 2009; Personal communication*). In a December 7, 2007 stakeholder meeting, DTSC suggested that filter fabric be placed against the west wall of Excavation 2 to demark the limits between soil containing PAHs above cleanup levels and backfill material. The excavation survey and Site LUCs will be used to identify the location of clean backfill relative to soil containing PAHs on the west wall of Excavation 2. Following placement of the filter fabric, ¾-inch drain rock was placed in Excavation 3 to approximately 5 feet bgs and bgs in Excavation 2 to approximately 3 to 3.5 feet bgs. The upper portion of the excavations were backfilled with Class II AB in 6-inch lifts and compacted by ERRG. ERRG tested the backfill to confirm that compaction specifications had been achieved (90% laboratory maximum density for cohesive materials, 95% laboratory maximum density for cohesionless materials, and 95% maximum density for subgrade fill). The test results are included in Appendix F. Shoring in Excavation 3 was pulled up as each lift of backfill was placed and was removed when the excavation was backfilled to approximately 4 feet bgs. Both excavations were backfilled to the ground surface. After backfilling Excavation 2, the area was paved with asphaltic concrete in accordance with the Technical Specifications (*MACTEC, 2007b*).

Confirmation soil sample results for Excavation 1 were presented to the Trust, NPS, DTSC, and Water Board and approval was given to backfill on March 25, 2008. Backfill operations for Excavation 1 began

on March 27, 2008 by placing ¾-inch drain rock in the excavation to approximately 4.5 feet bgs. The upper portion of the excavation was backfilled with AB in 6-inch lifts and compacted to grade. ERRG conducted compaction tests to confirm that compaction specifications had been achieved. The test results are included in Appendix F.

Confirmation soil sample results for the former sewer line pipe trench were presented to the Trust, NPS, DTSC, and Water Board and approval was given to backfill on May 20, 2008. Backfill operations for the trench took place on June 9 and 10, 2008 by placing AB in 6-inch lifts, and compacting to grade. Because the sewer line trench was outside of RU-A and within the Doyle Drive reconstruction area, the Trust determined that compaction specifications for RU-A would not be required for the sewer line excavation. The Trust directed ERRG to compact backfill below 1 foot bgs in the sewer line excavation to 90% of the laboratory maximum density and to compact backfill from 0 to 1 foot bgs to 95% laboratory maximum density. ERRG conducted compaction tests to confirm that the Trust's compaction requirements had been achieved. Six of the seven tests conducted on June 9, 2008 on backfill below 1 foot bgs met or exceeded 90% compaction. One of the seven tests on June 9, 2008 was below 90% compaction - Test 6 at 1.5 feet bgs which was 89%. Backfill at the location of Test 6 was re-tested and showed 98% compaction. On June 10, 2008, Tests 1 and 4 conducted on backfill at 1.0 and 0.5 foot bgs, indicated that backfill compaction did not meet Trust requirements. Test 1 at 1.0 foot bgs was below 95% and the backfill at that location was re-compacted and retested twice until it met specifications. Backfill at the location of Test 4 at 0.5 foot bgs was retested and shown to meet Trust requirements. The test results are included in Appendix F.

2.4.7 Soil Profiling and Disposal

ERRG collected three composite samples (1065SC300, 1065SC301, and 1065SC302) from the stockpiled soil removed from Excavations 1, 2 and 3, and one composite sample (1065SC303) from the stockpiled soil removed from the sewer line excavation. Laboratory analytical reports are included in Appendix G. Based on Soluble Threshold Limit Concentration (STLC) tests for lead, the stockpiled soil from Excavations 1, 2, and 3 was disposed as Class I non- Resource Conservation and Recovery Act (RCRA) hazardous waste. On April 30, 2008 and May 1 and 2, 2008 Denbeste Transportation, Inc. of Windsor, California, transported and disposed approximately 1,840 tons (78 truckloads) of soil (stockpiles from Excavations 1, 2, and 3) at Chemical Waste Management Landfill in Kettleman Hills, California. On June 16 and 27, 2008 DenBeste Transportation, Inc. trucking of Windsor, California transported and disposed of approximately 159 tons (8 truckloads) of soil from the excavation of the storm drain at the

Altamont Landfill & Resource Recovery Facility in Livermore, California. Disposal receipts, profiles, and waste manifests are included in Appendix H. Between October 24, 2007 and July 15, 2008, ten loads of concrete and asphalt were transported for recycling at the Brisbane Recycling Co., Inc. facility in Brisbane, California.

2.5 Laboratory Analysis and Data Validation

Laboratory analyses were performed in accordance with the QAPP by Curtis & Tompkins, Ltd. Preliminary analytical results were provided as electronic disc deliverables (EDDs) and Level II reports that were submitted electronically to MACTEC within 2 to 5 working days of submittal of the samples. These preliminary data were loaded into a preliminary data site in MACTEC's SQL database and summary tables were prepared that presented excavation confirmation sampling results. These summary tables were used by the project team for field decisions, and shared with the Water Board and stakeholders during meetings.

Final data were provided to MACTEC on a Trust-formatted EDD, which was loaded into MACTEC's SQL database. Comprehensive certificates of analysis (CCAs) and raw data packages were also provided within 20 to 30 days of sample collection in hard copy and electronic copy format. Analytical reports are provided in Appendix D. Level II and Level III validation qualifiers were loaded into the database, as were northing and easting coordinates for the samples. Tables presented in this report contain Level II and III validation qualifiers.

After completion of field work, qualifiers and coordinates extracted from MACTEC's database were amended to the Presidio EDD for submittal to Trust for loading into the Presidio database.

Data were validated in accordance with the QAPP and USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review, October 1999, USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review, October 2004. Preliminary data underwent Level II validation; Level II data validation reports were prepared and submitted to the Trust during the course of field work. Level III and Level IV data review was performed using data provided on the CCAs and raw data packages. Level II, Level III, and Level IV data validation reports are provided in Appendix I.

3.0 INSTALLATION AND DEVELOPMENT OF MONITORING WELLS AND GROUNDWATER MONITORING

3.1 Installation and Development of Monitoring Wells

On May 30, 2007, Gregg Drilling and Testing (Gregg) abandoned piezometers 1065PZ1A and 1065PZ1B, and wells 1065MW9A and 1065MW9B, and installed new well 1065MW103A under the supervision of a field geologist from Treadwell & Rollo, Inc. (T&R). The borehole for well 1065MW103A was continuously sampled by Gregg, and lithologically logged by T&R.

On June 1, 2007, Blaine Tech developed 1065MW103A in accordance with the Presidio Trust's Standard Operating Procedure for Well Development. On June 12, 2007, the location and elevation of the top of the casing was surveyed by Chaudhary, Inc; survey data are provided in Appendix J1. Well abandonment records, the well boring log, well construction diagram, and monitoring well development data sheets are included as attachments to Treadwell & Rollo, Inc's report *Monitoring Well Destruction, Installation, and Development, Building 1065 Area, Presidio of San Francisco, San Francisco, California* (*T&R, 2007a*), which is included in Appendix J1, Attachment C.

3.2 Groundwater Monitoring

3.2.1 Pre-Excavation Groundwater Monitoring

Groundwater samples were collected by T&R in March 2007 (First Quarter 2007) from piezometers 1065PZ1A and 1065PZ1B and wells 1065MW101 and 1065MW102 as part of the Basewide Groundwater Monitoring Program, and in June 2007 (Second Quarter 2007) and August 2007 (Third Quarter 2007; *T&R, 2007b*) from monitoring well 1065MW103A as part of the groundwater sampling program prescribed in the CAP and Work Plan (*MACTEC, 2007a* and *c*). Except for 1065PZ1B, the wells and piezometers downgradient of RU-A are screened in the first water-bearing zone. Piezometer 1065PZ1B was installed in the intermediate groundwater zone. First, Second, and Third Quarter 2007 groundwater sampling results are considered to be representative of baseline groundwater groundwater conditions prior to excavation of soil from RU-A. Tables summarizing groundwater monitoring results are included in Appendix J2.

Prior to start of construction, MACTEC reviewed the First and Second Quarter 2007 monitoring data to assess whether there were any significant differences in chemical concentrations or field measurements

between First and Second Quarter 2007 data and historical groundwater monitoring data. Results of the evaluation were presented in a memorandum dated September 25, 2007 and were discussed in stakeholder meeting on October 31, 2007. Based on comments from the meeting, the memorandum was revised and is included in Appendix J3. Conclusions of the memorandum are summarized below.

First and Second Quarter 2007 groundwater monitoring data from wells and piezometers downgradient of RU-A showed relatively lower concentrations of chemical concentrations than had been detected in the previous three quarters of groundwater monitoring. Analytical results for the newly installed well 1065MW103 showed that groundwater COCs; TPHg, benzene, and arsenic; were not detected in 1065MW103. In addition, review of First and Second Quarter 2007 monitoring data did not suggest the need to re-evaluate the recommended rates for application of oxygen releasing compound estimated in the Work Plan.

As previously discussed, 1065MW103A was sampled on August 21, 2007 (Third Quarter 2007). Review of data from this sampling event indicates that the groundwater COCs TPHg and benzene were not detected in the groundwater sample collected from 1065MW103A and arsenic was detected at 6.9 µg/L, below the Site cleanup level of 10 µg/L.

3.2.2 Initial Round of Post Excavation Groundwater Monitoring

Groundwater samples were collected by Treadwell and Rollo in June 2008 (Second Quarter 2008) from wells 1065MW101, 1065MW102, and 1065MW103 as part of the Basewide Groundwater Monitoring Program. TPHg and benzene were not detected above the laboratory reporting limits in the groundwater samples collected from these wells. Arsenic was reported at 32 µg/L in 1065MW101A, 11 µg/L in 1065MW102A, and 5.8 µg/L in 1065MW103A. These concentrations are consistent with those reported for the groundwater samples collected prior to the excavation program. Tables showing the results of the most recent groundwater monitoring are included in Appendix J2.

3.2.3 CAP Groundwater Monitoring Program

As indicated in Table 9 of the CAP, monitoring wells and piezometers will be sampled quarterly for one year following excavation (three additional quarters) for TPHg and BTEX, arsenic and redox parameters; semi-annually thereafter for TPHg and BTEX; and annually thereafter for arsenic and redox parameters to (a) verify dissolved TPHg and BTEX in groundwater are below Site cleanup levels, and (b) assess whether concentrations of these chemicals in wells and piezometers at RU-A show trends over time. Results will be presented in the Presidio-Wide Semi-Annual Groundwater Monitoring Reports. After

TPHg, BTEX, and arsenic are demonstrated to be below cleanup levels for four consecutive sampling rounds, monitoring will be discontinued (subject to Water Board approval), and clean closure with regards to groundwater contamination will be documented in a site closure request. The site closure request will include a request for abandonment of onsite wells and piezometers.

4.0 OUTDOOR CAP INSPECTION

The objectives of the outdoor cap inspection were to examine and document the existing surface outside the footprint of the Building 1040 (LUC Zone 3) as well as document conditions in two other areas of the site where concentrations of COCs above cleanup levels remain in soil (LUC Zones 1 and 2). MACTEC conducted this inspection on June 3, 2008 and the inspection form, photographs, and notes from the inspection are included in Appendix K.

In June 2008, the surface of the cap over LUC Zone 3 comprised bare soil on the west side of Building 1040 and concrete and asphalt pavement on the north side of Building 1040. The cap over the LUC area east of Excavation 2 (LUC Zone 1) consisted of new and old asphalt and the cap of the LUC area between Excavations 1 and 3 (LUC Zone 2) consisted of compacted AB, the building foundation, and a concrete slab at the eastern and western sides of Excavation 3 within Building 1063.

No improvements to these caps are recommended at this time; however, the LUC Zones at the Site should be inspected annually and inspections documented and information managed under the Trust's LUC program.

5.0 INDOOR AIR ASSESSMENT AND CAP INSPECTION

EKI performed an indoor air and cap assessment at Building 1040 in accordance with EKI's *Building 1040 Indoor Air and Cap Assessment Work Plan for the Building 1065 Area* (*EKI, 2008a*). The indoor air assessment was conducted to assess potential vapor intrusion to indoor air, the integrity of the foundation which is serving as a cap to limit the potential exposure to residual petroleum hydrocarbons beneath the building, and review the need for potential improvements to the cap.

5.1 Soil Gas Sampling and Analysis

On April 18, 2008, EKI collected six soil vapor samples (1040SG101 through 1040SG106) from locations around Building 1040. Sample locations are shown on Figure 2 of EKI's *Vapor Intrusion Assessment and Field Sampling Report* (*EKI, 2008b*) which is included in Appendix L.

Table 1 of EKI's *Vapor Intrusion Assessment and Field Sampling Report* (*EKI, 2008b*; Appendix L) presents analytical results for the soil gas samples collected on April 18, 2008. VOCs and PAHs were not detected at concentrations exceeding Water Board's commercial/industrial or residential Environmental Screening Levels (ESLs) (*Water Board, 2005*). There are no published soil gas ESLs for four of the detected analytes (which were detected at concentrations just above their respective reporting limits): 4-ethyltoluene; Freon 11; 1,3,5-trimethylbenzene; and 1,2,4-trimethylbenzene.

EKI concluded that results below residential ESLs indicated that risks associated with petroleum hydrocarbons and related constituents in soil gas are within acceptable ranges (i.e., less than one-in-a-million) to future Building 1040 occupants, and that no further action with regard to vapor intrusion mitigation was recommended in response to the results of the sampling.

5.2 Indoor Cap Assessment

On June 3, 2008, EKI conducted an indoor cap assessment at Building 1040 which included inspecting the interior of the building for visible cracks, penetrations, and gaps that could potentially allow for direct contact with COCs in soil under the building. Observations were documented in EKI's *Vapor Intrusion Assessment and Field Sampling Report* (*EKI, 2008b*; Appendix L). As a result of the inspection, EKI concluded that the floor and basement wall in the vicinity of residual petroleum hydrocarbons in soil provide an adequate barrier to prevent direct contact with the underlying soil.

6.0 LAND USE CONTROLS

The DTSC requires sites that do not fully meet the most stringent Presidio-specific human health cleanup levels (i.e., residential cleanup levels) and/or site-specific ecological cleanup levels to have land use restrictions to inform and protect future users concerning the presence of residual contaminants. MACTEC has prepared a Site-Specific Addendum to the Presidio Trust LUCMRR (*Trust, 2006*) because soil in specific areas of the Site contains contaminants at concentrations exceeding site-specific cleanup levels. This addendum to the LUCMRR is presented in Appendix M.

Three areas at the Site have been identified that require implementation of a LUC. These have been identified as LUC Zones 1 through 3 as described below:

- LUC Zone 1 is located north of Building 1063 and overlaps into Fill Site 6B;
- LUC Zone 2 is located beneath the southwest wall of Building 1063; and
- LUC Zone 3 is located beneath and just west of the northwest corner of Building 1040.

The three LUC Zones are shown on Figure 6-1 and details regarding the Site LUCs are presented in the Site-Specific Addendum to the LUCMRR (Appendix M).

7.0 SUMMARY

The corrective action at the Site was performed in general accordance with the CAP (*MACTEC, 2007a*), Technical Specifications, (*MACTEC, 2007b*), the Work Plan (*MACTEC, 2007c*), the Petroleum Contingency Plan (*EKI, 2004*), and the QAPP (*TetraTech, 2001*). Deviations from these planning documents were discussed in progress meetings with the Water Board and stakeholders and are documented in this Completion Report.

The corrective action met the RAOs identified in the CAP as described below:

- *Protection of Human Health and the Environment* - Where practicable, soil containing COCs at concentrations exceeding the most stringent applicable cleanup levels was excavated. At locations where the Trust assessed that soil was not practicable to remove, LUCs were implemented to inform and protect future users concerning the presence of residual contamination.

- *Cost-Effective Cleanup of the Site Consistent with its Potential Land Use and Preference for Permanent ("Clean Closure") Remedies whenever Practicable, Cost-Effective, and Consistent with Current or Anticipated Land Use* - Clean-closure by excavation and ORC application, as required, was selected for RU-A in the CAP based on the Trust's understanding of site conditions and their preference for clean closure remedies. However, during implementation of the remedy, based on the Remediation Contractor's estimated costs for shoring the foundation and removal of contamination beneath the foundation of Building 1063, the Trust re-evaluated alternatives and selected a LUC for residual contamination beneath the building wall, resulting in implementation of a more cost effective remedy for RU-A than "clean closure". The LUC and associated restrictions will be consistent with planned commercial use of the building.

- *Recycling Excavated Materials to the Extent Practicable* - Ten truckloads of concrete and asphalt removed during excavation work were recycled at Brisbane Recycling Co., Inc.

- *Compliance with State and Federal Environmental Laws* - The CAP was developed to meet requirements of the Water Board Order (*Water Board, 2003*) and fulfilled the California requirements of Title 23, California Code of Regulations (CCR), Division 3, Chapter 16, Article 11; and California Health and Safety Code, Chapter 6.8. The corrective action program

was reviewed and approved to by the Trusts N Squared committee to assure that NEPA and NHPA issues were considered and addressed. Soil was handled and disposed by ERRG in accordance with regulations requiring profiling and manifesting of waste generated during the program. Water removed from the excavations sampled and met requirements in the Trust's San Francisco Public Utilities Commission, Permit No. 05-0246 Industrial User Class II Wastewater Permit, dated February 7, 2005.

- *Consistency of the Selected Corrective Action Alternatives at the Site with the Overall Transformation of the Presidio into a National Park Site* - Where practicable, contaminated soil was removed by excavation. In cases where contamination was present beneath building foundations, to preserve the buildings and other structures of historical significance, LUCs were implemented to inform and protect future site users of the presence of residual contamination. Significant efforts were taken during excavation activities to preserve historical elements of Building 1063, including limiting removal of the columns to only the area of excavation and preserving walls, roofs, and doorways.

As discussed in Section 3.2.3, the Trust will continue implementation of the groundwater monitoring program prescribed in the CAP. After TPHg, BTEX, and arsenic are demonstrated to be below cleanup levels for four consecutive sampling rounds, monitoring will be discontinued (subject to Water Board approval), and clean closure with regards to groundwater contamination will be documented in a site closure request. In accordance with the Water Board Order, a Five-Year Status Report, which evaluates the effectiveness of this CAP for groundwater, will be completed and submitted to the Water Board for approval.

As discussed in Section 2.4.5.4, prior to occupation of Building 1063, the Trust plans to conduct a soil vapor assessment to evaluate potential human health risks from vapor intrusion to indoor air from residual contaminants in soil beneath the southern building wall. If results of the risk assessment show risks to future building occupants, the Water Board and stakeholders will consulted concerning alternatives for mitigation and/or remediation of the contaminated soil left in place beneath the building.

mg/kg = Milligram per kilogram
RWQCB ESL = Regional Water Quality Control Board Environmental Screening Levels
PRG = Preliminary Remediation Goal

(a) Only chemicals that were identified as COCs and/or were included in the confirmation sampling program are listed; chemicals shown in bold typeface are Site Chemicals of Concern.

(b) Cleanup levels selected from the following:

1 = Presidio-wide Cleanup Level Document (PWCLD; *EKI, 2002, revised 2006*), Table 7-2.

2 = Presidio-wide Cleanup Level Document (PWCLD; *EKI, 2002, revised 2006*), Table 7-5.

3 = RWQCB soil ESL (lowest of human toxicity and indoor air impacts) (*RWQCB, 2003*).

4 = RWQCB soil cleanup level (lowest of human toxicity and indoor air impacts) (*RWQCB, 2003*). Surrogate cleanup level for 2-hexanone is ESL for methyl isobutyl ketone (MIBK).

5 = Soil PRG (*USEPA, 2004*).

(c) Residential land use cleanup levels were selected, unless for metals, the background level was higher, then the background level was selected as the applicable cleanup level.

(d) Identified in MACTEC's January 24, 2007 Corrective Action Plan as a Chemical of Concern for the Building 1065 Area.

-- For chemicals with no cleanup levels, there are no Presidio cleanup levels, RWQCB ESLs, or USEPA PRGs.

Checked: SRG

Approved: MJH

Table 2-1. Summary of CAP Implementation Activities

Time Period	Description of Activities
February 26 through March 2, 2007	Treadwell and Rollo collected groundwater samples from piezometers 1065PZ1A and 1065PZ1B and wells 1065MW101 and 1065MW102 as part of the First Quarter 2007 Basewide Groundwater Monitoring Program.
May 30, 2007	Gregg Drilling and Testing (Gregg) abandoned piezometers 1065PZ1A and 1065PZ1B and wells 1065MW9A and 1065MW9B and installed new well 1065MW103A under the supervision of a field geologist from Treadwell & Rollo, Inc.
June 1, 2007	Blaine Tech developed 1065MW103A in accordance with the Presidio Trust's Standard Operating Procedure for Well Development.
June 7, 2007	Treadwell and Rollo collected groundwater samples from monitoring well 1065MW103A as part of the groundwater sampling program prescribed in the CAP and Work Plan.
June 12, 2007	Chaudhary, Inc. surveyed the location and elevation of the top of the casing of new well 1065MW103A.
June 21, 2007	Held pre-construction meeting with stakeholders.
July 6, 2007	Conducted pre-excavation survey of excavation areas.
August 21, 2007	Treadwell and Rollo collected groundwater samples from monitoring well 1065MW103A as part of the groundwater sampling program prescribed in the CAP and Work Plan.
October 15 through 26, 2007 (Weeks 1 & 2)	Mobilized equipment to Site including Conex box and 20,000-gallon storage tank. Erected fence around Site. Saw cut and removed asphalt from Excavation Areas 2 and 3. Saw cut of concrete in Excavation Area 1 and removal of concrete around the roof support columns. Removal of wood planks from mezzanine.
October 29 through November 2, 2007 (Week 3)	Set up soil stockpile area. Began excavation of Excavation 3. Installed excavation shoring. Removed conductor casing from former well in center of the excavation and grouted up the hole to prevent potential cross contamination. Removed vault on western end of Excavation 3 and began removal of pipe west of excavation. Began dewatering Excavation 3. Collected confirmation soil samples 1065EX350 through 1065EX362 and water sample 1065DE201 from the holding tank. First stakeholder progress meeting.
November 5 through 8, 2007 (Week 4)	Completed excavation of Excavation 3. Collected confirmation soil samples 1065EX363 through 1065EX365. Evaluated removal/redirection of sprinkler system from mezzanine section over Excavation 1. Received approval for and began discharge of water from holding tank into the sanitary sewer via gravity flow at an average 69 gallons per minute. Removed concrete and asphalt for recycling.
November 13 through 16, 2007 (Week 5)	Completed excavation of Excavation 2 to 7 feet bgs. Collected confirmation soil samples 1065EX341 through 1065EX345 from Excavation 2. Overexcavated Excavation 3 on the western sidewall where COC concentration in one confirmation sample exceeded the cleanup level. Collected confirmation soil samples 1065EX366 and 1065EX367 from Excavation 3. Stakeholder progress meeting and meeting to discuss Building 1040 Indoor Air and Cap Assessment Work Plan.
November 19 through 21, 2007 (Week 6)	Performed overexcavation of north, east, and west sidewalls of Excavation 2. Collected confirmation soil samples 1065EX346 through 1065EX348. Stakeholder progress meeting.
November 26 through December 7, 2007 (Weeks 7 & 8)	No work performed due to holiday and inclement weather.
December 10 through 14, 2007 (Week 9)	Conference call with Water Board and DTSC to discuss confirmation analytical results and obtain approval to backfill Excavations 2 and 3. Surveyed excavation limits and soil sample locations for Excavations 2 and 3. Project team technical meeting to develop strategy for addressing residual contamination left in place in northern sidewall of Excavation 3.
December 17 through 21, 2007 (Week 10)	Installed sump pump in Excavation 3 to draw down water before backfill operations. Placed woven filter fabric along north side of Excavation 3 to demark the northern excavation limits prior to backfill. Collected sample 1065SD100 from sediment within the 12-inch ID clay pipe exiting the western end of Excavation 3 and capped the pipe with a concrete plug before backfilling. Installed drain rock in Excavation 2 (to approximately 3.5 feet bgs) and Excavation 3 (to approximately 5 feet bgs) and began backfilling excavations with AB roadbase in 6-inch lifts to a 95% compaction.
December 24 through 27, 2007 (Week 11)	Continued backfilling activities. Some delays due to rain and holiday.
December 31, 2007 through January 4, 2008 (Week 12)	Short week due to holiday and rain. Continued backfill activities. Sprinkler system reroute work began.

Table 2-1. Summary of CAP Implementation Activities

Time Period	Description of Activities
January 7 through 11, 2008 (Week 13)	Completed the sprinkler system reroute. Completed demolition and removal of mezzanine over Excavation 1. Completed removal of shoring boxes from Excavation Area 3 and continue backfilling activities. Began shoring for first row of support columns inside Building 1063. Collected samples of drain rock and road base material from Aromas Quarry and submitted for analysis.
January 14 through 18, 2008 (Week 14)	Completed placement and compaction of backfill materials to the ground surface in Excavations 2 and 3. Completed installation of shoring for the northernmost row of support columns inside Building 1063.
January 21 through 25, 2008 (Week 15)	Placed asphaltic pavement over Excavation 2. Removed supports from northernmost row of support columns inside Building 1063 and excavated down to 10 feet bgs for concrete piers. Collected samples 1065EX301 and 1065EX302 at 8.5 feet bgs from beneath columns 2 and 3 (16 columns in area and numbered 1 through 16 from left to right and from the northernmost to southernmost rows).
January 28 through February 1, 2008 (Week 16)	Placed sono tubes and poured and tested concrete for northernmost row of support columns inside Building 1063. Replaced support columns with temporary supports and removed roof shoring from row. Stakeholder meeting to discuss Building 1040 Indoor Air and Cap Assessment Work Plan.
February 4 through 29, 2008 (Weeks 17 to 20)	Placed shoring, removed supports, excavated beneath supports to approximately 9.75 feet bgs. Placed sono tubes, poured and tested concrete to 4,000-psi, replaced building supports with temporary support columns, and removed shoring for rows 2 through 4 inside Building 1063. Teleconference - Test methods for evaluation of naphthalene in soil vapor.
March 3 through 7, 2008 (Week 21)	Began excavating Excavation 1 inside Building 1063. Collected confirmation soil samples 1065EX303 through 1065EX306. Discovered and removed a 4-inch ID clay pipe at approximately 6 feet bgs.
March 10 through 14, 2008 (Week 22)	Continued excavation of Excavation 1 inside Building 1063. Cleaned out holding tank with pressure washer - final discharge amount to sewer = 90,044 gallons
March 17 through 21, 2008 (Week 23)	Finished initial excavation of Excavation 1 inside Building 1063. Collected confirmation soil samples 1065EX308 through 1065EX314. Removed 20,000-gallon holding tank from site. Stakeholder meeting.
March 24 through 28, 2008 (Week 24)	Broke up concrete for disposal/recycling. Removed soil left in place (overexcavate) along eastern sidewall of Excavation 1. Collected confirmation soil sample 1065EX315[5.0] from eastern sidewall. Began backfilling of Excavation 1 with drain rock. Surveyed excavation limits and soil sample locations. Stakeholder meeting.
March 31 to May 2, 2008 (Weeks 25 - 29)	Completed backfill and compaction of Excavation 1 (drain rock to 4.5-feet bgs, AB road base from 4.5-feet bgs to surface). Shored up building roof. Removed temporary roof support columns. Poured new concrete footings and replaced the temporary columns with new permanent supports. Removed roof shoring (for first three rows of columns - northern rows). Loaded, hauled, and disposed of 78 loads of non-RCRA Class I hazardous waste to Kettleman Hills. EKI collected soil gas samples on April 18, 2008 from 6 locations outside Building 1040 (Sample locations 1040SG101 through 1040SG106).
May 5 through 9, 2008 (Week 30)	Excavated and removed 12-inch clay pipe entering the western end of Excavation 3 (removed approximately 60 feet of piping from a 2-foot wide by 8-foot deep trench). Collected confirmation soil samples (bottom samples beneath removed pipe) 1065EX368[8.0], 1065EX369[8.0], and 1065EX370[8.0].
May 12 through 16, 2008 (Week 31)	Continued to excavate and remove the 12-inch pipe that entered the western end of Excavation 3 - extended trench an additional 22 feet uncovering an inactive storm drain vault where the pipe terminated and two separate pipes entered. Collected sample 1065EX371[8.0] at the bottom of the storm drain vault foundation. Performed housekeeping inside Building 1063 and removed construction fencing from the site.
May 19 through June 6, 2008 (Weeks 32 -34)	June 3, 2008 - EKI performed indoor cap assessment at Building 1040 and MACTEC conducted outdoor cap inspection for LUC Zones 1, 2, and 3 (MACTEC).
June 9 through 13, 2008 (Week 35)	ERRG backfilled and compacted the sewer line excavation. T&R collected groundwater samples from wells 1065MW101, 1065MW102, and 1065MW103 as part of the Second Quarter 2008 Basewide Groundwater Monitoring Program.
June 16 through August 8, 2008 (Weeks 36 - 43)	On August 7, 2008, surveyed the sewer line excavation limits, final grade, and survey points for LUC zones.

Checked: SRG Approved: MJH

Table 2-2. Summary of Stakeholder Meetings

Date	Attendees	Purpose/ Discussion Topics	Key Discussion Points and Agreements
June 21, 2007	• Ryan Seelbach (Trust) • Brian Ullensvang (NPS) • Devender Narala (Water Board) • Melanie Enman (ERRG) • Mary Jo Heassler, Scott Graham, Ram Rao (MACTEC)	Overview of excavation approach	• Initial trenching would not be performed as the foundation shoring and column support design allowed for a phased approach to column removal and excavation. • The NPS would review some of the contractor submittals, specifically the shoring design, to ascertain whether the design might impact the planned remedy. • The same survey datum would be used for both well and excavation surveys. • The column supports and buttresses would extend into Bay Mud. • Excavation would target removal of petroleum-related contamination, not isolated metals or PAHs that are not associated with petroleum and may be from fill. The Trust would include stakeholders in discussions as to whether contamination is petroleum-related and whether excavation program meets remedial objectives. • The Trust planned to hold progress meetings with stakeholders at project milestones to provide updates, discuss issues, and make decisions. • ORC would only be applied to the excavation if confirmation sample analytical results do not meet cleanup levels for petroleum-related COCs. Stakeholders would be included in decisions regarding ORC application before the material is brought onsite. • The revised excavation approach would be documented by revising the work plan.
October 30, 2007	• Ryan Seelbach (Trust) • Brian Ullensvang (NPS) • Devender Narala (Water Board) • Tyson Appel (ERRG) • Ram Rao and Scott Graham, (MACTEC)	Progress to date at site	• Water Board and NPS were in concurrence with the approach used to address the survey conflicts documented in the August 29 progress report. • An approximate 12-inch diameter, 18.5-foot long steel conductor casing was discovered in Excavation 3. The hole through which the conductor casing was removed would be tremmie-grouted to seal the hole up to the surface. • The Area 1 excavation (inside Building 1063) would be partially backfilled. Accordingly, the Water Board requirement for nondetect concentrations of petroleum compounds in backfill in the upper 18-inches would not apply for backfill in Excavation Area 1.
November 13, 2007	• Ryan Seelbach (Trust) • Devender Narala (Water Board) • Tyson Appel (ERRG • Scott Graham (MACTEC)	Update on status of remedial construction and results of excavation confirmation sampling of Excavation 3	• For VOCs that do not have cleanup levels, the Water Board indicated that it would not be necessary to develop cleanup levels for these additional VOCs (many of which were not detected). • Excavation 3 would be backfilled by placing semi-impermeable fabric in the excavation, and backfilling the excavation with drain rock and Class II AB.
November 14, 2007	• Craig Cooper and Ryan Seelbach (Trust) • Devender Narala and Elizabeth Allen (Water Board) • Michelle King (EKI)	Water Board Comments on Draft Building 1040 Indoor Air and Cap Assessment Work Plan	• Trust stated that the CAP requirement for indoor air sampling varied from the IA guidance and work plan. • Water Board suggested that the CAP be clarified to state the intent was an indoor air assessment, rather than indoor air sampling. • If chemicals of concern are detected in soil gas at levels that could pose a significant risk from vapor intrusion to future

Table 2-2. Summary of Stakeholder Meetings

Date	Attendees	Purpose/ Discussion Topics	Key Discussion Points and Agreements
			occupants, the Trust could present options in the Completion Report for potential follow-up assessment as part of the redevelopment (e.g., seal cracks, positive pressure air displacement system, indoor air sampling). • Water Board stated that the guidance does not currently require indoor air sampling in an unoccupied building. • Participants agreed that if ESLs or site-specific goals are exceeded in soil gas, the rest of the guidance would be implemented prior to building occupancy. Interim restrictions could be incorporated into a LUC.
November 20, 2007	• Ryan Seelbach (Trust) • Devender Narala (Water Board) • Tyson Appel (ERRG • Scott Graham and Mary Jo Heassler (MACTEC)	Update on status of remedial construction and results of excavation confirmation sampling of Exavations 2 and 3	• The confirmation soil sample collected from the over-excavated sidewall at the west end of Excavation 3 (1065EX367[4.0]) showed that TPH fuel oil was detected at 5.6 mg/kg, indicating that soil containing TPH fuel oil above cleanup levels had been removed from the western portion of Excavation 3. • Soil on the north sidewall of Excavation 3 where TPH fuel oil, diesel, and gasoline exceeded cleanup levels would be removed when soil is excavated from Area 1. • Soil was excavated from Area 2 and confirmation sampling showed that detected concentrations of the PAH benzo(a)pyrene and TPH fuel oil were above cleanup levels in three sidewall samples. PAHs may be related to contaminated fill associated with Fill Site 6B. • It was agreed that the Trust would over-excavate soil at the location of the TPH fuel oil exceedance and would remove 1 to 3 feet of soil from the sidewalls where benzo(a)pyrene exceeded cleanup levels and collect confirmation samples. If this one round of over-excavation did not remove the PAH exceedances, then the Trust would consider addressing this area as part of Fill Site 6B. The Trust would discuss this approach with DTSC (Bob Boggs). • Confirmation samples from the over-excavated areas would be analyzed for TPH fuel oil, TPH diesel, and PAHs.
December 7, 2007	• Ryan Seelbach (Trust) • Devender Narala (Water Board) • Bob Boggs (DTSC)	Request to backfill Excavations 2 and 3. D. Narala attended by phone.	• Received authorization from Water Board to backfill Excavations 2 and 3. • DTSC suggested that filter fabric be placed against the west side of Excavation 2 where confirmation sample contains PAHs above cleanup levels. Following excavation, the FS 6B boundary would be re-drawn to include the west sidewall sample from Excavation 2 and any other chemicals that exceed for non fuel related contamination that is left in-place.
January 30, 2008	• Ryan Seelbach (Trust) • Devender Narala and Elizabeth Allen (Water Board) • Brian Ullensvang (NPS) • Doug Kern (RAB) • Michelle King (EKI)	Building 1040 Indoor Air and Cap Assessment Work Plan (1040 Work Plan)	• Performing a vapor intrusion potential assessment at Building 1040 (as proposed in the draft 1040 Work Plan) differed from the previously approved CAP, which called for indoor air monitoring at the Site. • An Addendum to the CAP (in the form of a letter) would be prepared to indicate that the indoor air sampling for Building 1040 identified in the CAP was modified to be a vapor intrusion assessment of Building 1040. • The 1040 Work Plan would be modified to be a vapor intrusion assessment that would include soil gas sampling as the first phase of the assessment. • Naphthalene could be a chemical of potential concern given that

Table 2-2. Summary of Stakeholder Meetings

Date	Attendees	Purpose/ Discussion Topics	Key Discussion Points and Agreements
			the release was fuel oil (and not gasoline). The proposed method for analysis TO-15 tends to underestimate naphthalene concentrations due to sorption of naphthalene onto the SUMMA canister. Cal-EPA is evaluating alternate methods for naphthalene analysis in air samples, such as TO-17.
February 22, 2008	• Ryan Seelbach (Trust) • Michelle King (EKI) • Elizabeth Allen (Water Board)	Teleconference - Test methods for evaluation of naphthalene in soil vapor	• A laboratory contacted regarding soil gas analytical methods indicated that Method TO-13 is a better method than TO-17 for analysis of naphthalene and other semi-volatile organic compounds, because TO-17 uses an adsorbent tube that is thermally desorbed (i.e., a destructive sampling technique in which a given sample cannot be re-analyzed), whereas the TO-13 adsorbent tube is extracted in a solvent and run like an EPA 8270 analysis. Therefore, the solvent extract can be re-analyzed, if necessary. • It was agreed that soil gas samples would be analyzed for VOCs using Method TO-15 and TO-13 would be used to analyze for naphthalene if naphthalene had been previously detected in soil samples collected from the Site. • Because there were insufficient data regarding naphthalene in soil, soil gas samples collected as part of the vapor intrusion assessment would be analyzed for VOCs and PAHs using both Methods TO-13 and TO-15.
March 18, 2008	• Ryan Seelbach, Eileen Fanelli (Presidio Trust) • Brian Ullensvang (NPS) • Agnes Farres (Water Board) • Tyson Appel, James Medley (ERRG) • Scott Graham (MACTEC)	Update on work performed in Excavations 1, 2, and 3; and planned work including shoring and excavation of soil beneath south building wall and removal of former sewer pipe	• Discussed samples collected from Excavation 1 and proposed sample locations for the remaining confirmation samples. • Agreed that the southernmost eastern sidewall sample would be collected as close to the foundation as possible by potholing near the foundation and collecting the sample at around 4 feet bgs (comparable to depth of 1065EX355). • Discussed the shoring plan for the building foundation along southern sidewall of Excavation 1 and cost for removal of soil. • Would estimate the mass of TPH gasoline in soil beneath the southern wall of Building 1063 and compare costs for excavation of soil vs. insitu treatment. Evaluation would be discussed in next stakeholder meeting.
March 25, 2008	• Ryan Seelbach and Eileen Fanelli (Presidio Trust) • Brian Ullensvang (NPS) • Agnes Farres (Water Board) • Bob Boggs (DTSC) • Doug Kern (RAB) • Tyson Appel and James Medley (ERRG) • Mary Jo Heassler and Scott Graham (MACTEC)	Update concerning excavation work inside of Building 1063 and discussion of the next steps for the remedial program	• Two sidewall confirmation samples collected from Excavation 1 contained TPH at concentrations exceeding cleanup levels, one collected on the east wall, the other in southeast corner of the excavation, adjacent to a shear wall. • Soil in the southeast corner could not be removed because of its proximity to the shear wall; however, soil on east sidewall could be removed by the excavation. No additional soil could be removed unless additional shoring is installed. • Soil at and beneath the south wall of Building 1063 contained TPH at concentrations exceeding cleanup levels protective of groundwater quality. There were also potential health risks from possible vapor intrusion into indoor air. It was not expected that there would be groundwater impacts from soil contamination left in place because pre-excavation groundwater monitoring in downgradient wells did not show petroleum hydrocarbons constituents at concentrations exceeding cleanup levels.

Table 2-2. Summary of Stakeholder Meetings

Date	Attendees	Purpose/ Discussion Topics	Key Discussion Points and Agreements
			• Estimated costs for removal of soil beneath the wall including installation of shoring, excavation of soil, and offsite disposal of soil was approximately $50,000. • The estimate of TPH gasoline remaining in soil, assuming that maximum detected concentration of TPH gasoline was present below 4 feet was approximately 105 pounds. • The cost of ORC advanced to address residual contamination would be $5,000. There would be additional costs associated with injection of ORC, monitoring, confirmation sampling, and reporting. • There would be likely future additional costs associated with engineered controls for installation of vapor barriers to reduce potential vapor migration to indoor air. • Before soil could be excavated beneath the wall, shoring needed to be installed beneath the wall. Prior to installation of shoring, the rest of the excavation needed to be backfilled. • Backfilling would take about 2 to 3 weeks so there would be time for decisions to be made concerning removal of soil beneath the south building wall. • It was agreed that ERRG would excavate soil from the east wall of Excavation 1 to the limits of the area where columns had been removed and remove any sloughed soil from the floor of the excavation and that MACTEC would collect a confirmation soil sample from the east wall to verify that the contaminated soil had been removed. • It was agreed that after soil was excavated and an additional confirmation sample collected, Excavation 1 could be backfilled. • It was agreed that a cost estimate would be prepared for insitu treatment of soil to include post application costs to include monitoring, confirmation sampling, and reporting. These cost estimates would be discussed in the next meeting and decisions made regarding contamination beneath the south building wall.

April 8, 2008			• Alternatives for addressing contamination beneath the building wall were discussed and included:
			  • No Action - Leave contaminated soil in place and address with a LUC.
			  • Excavation - Install shoring, excavate the majority of contamination beneath the building wall, and treat contaminated soil left in place at the southeast corner of Excavation 1 with ORC or RegenOx™ insitu.
			  • ORC Advanced™ Injection - Treat TPH left in place beneath the building wall by injection of ORC Advanced™ using direct push injection angle borings.
			  • ORC Advanced™ Trench Application - Treat TPH left in place using ORC Advanced™ placed in a trench along the south side of the wall.
			  • RegenOx™ Injection - Treat TPH left in place through injection of RegenOx™ using direct push injection angle borings.
			  • RegenOx™ Trench Application - Treat contaminants left in place using RegenOx™ placed in a trench along the south side of the building wall.
			• As presented in the alternatives table, the five methods for remediation of the remaining soil beneath the southern building

Table 2-2. Summary of Stakeholder Meetings

Date	Attendees	Purpose/ Discussion Topics	Key Discussion Points and Agreements
			wall involved high costs for incomplete removal of contamination and similar groundwater monitoring costs and potential costs for indoor vapor monitoring. • There were concerns expressed about leaving soil above cleanup levels beneath Building 1063 due to the potential human health risk associated with the proposed water treatment plant construction and occupation. • Based on evaluation of alternatives and relative costs, it was agreed that contamination would be left in place. Prior to construction of the treatment plant in Building 1063, the Trust would conduct a soil vapor risk assessment to assess whether there is human health risk from vapor intrusion to indoor air from residual contaminants in soil. The Trust, NPS, Water Board, and stakeholders would evaluate alternatives for mitigation and/or remediation of the contaminated soil left in place pending results of the soil vapor assessment. • The Trust would continue groundwater monitoring as outlined in the Corrective Action Plan and Corrective Action Work Plan.
May 27, 2008	• Ryan Seelbach and Eileen Fanelli (Presidio Trust) • Brian Ullensvang (NPS) • Agnes Farres (Water Board) • Bob Boggs (DTSC).	Update on results of sewer line removal west of Building 1063. Present the results and recommendations of the Building 1040 soil vapor assessment Onsite backfill source	• Trust presented the sampling data and observations of the sewer line where it terminated at the vault. • Two sewer lines that entered the vault did not contain black sludge, lines were plugged. • Samples were collected from soil beneath the line and results showed that COC concentrations were nondetect or below cleanup levels. • Water Board authorized the Trust to backfill the pipe excavation. • Water Board gave approval to use 'dustbowl" material as backfill. • Findings of the Building 1040 soil vapor assessment showed no contaminants above ESLs.

AB	Aggregate base
CAP	Corrective Action Plan
COC	Chemical of concern
DTSC	Department of Toxic Substances Control
ESLs	Environmental Screening Levels
ERRG	Engineering/Remediation Resources Group, Inc.
IA	Interim Action
LUC	Land use control
MACTEC	MACTEC Engineering and Consulting, Inc
NPS	National Park Service
PAH	Polycylic aromatic hydrocarbons
ORC	Oxygen releasing compound
TPH	Total petroleum hydrocarbons
Trust	Presidio Trust
VOCs	Volatile organic compounds
Water Board	California Regional Water Quality Control Board

bgs = below ground surface

TAT = turn around time

[A] Feet north of southern wall of building using the orientation of the building to determine direction (i.e., southern wall considered to be perpendicular to north, not true north).

[B] Feet east of western interior wall of the building using the orientation of the building to determine direction (i.e., west wall considered to be parallel to north, not true north).

--	Indicates no Presidio cleanup level
mg/kg	Milligrams per kilogram
	Results outlined in a box indicate that concentrations exceed cleanup levels.
(1)	From Table 7-5 of the Presidio-Wide Cleanup Level Document.
ND(0.29)	Not detected at reporting limit indicated in parentheses.

mg/kg Milligrams per kilograms
Results outlined in a box indicate that concentrations exceed cleanup levels.
ND(0.29) Not detected at reporting limit indicated in parentheses.
-- Indicates no cleanup level identified in CAP.

mg/kg Milligrams per kilograms

Results outlined in a box indicate that concentrations exceed cleanup levels.

ND(0.29) Not detected at reporting limit indicated in parentheses.

-- Indicates no cleanup level identified in CAP.

mg/kg Milligrams per kilograms

Results outlined in a box indicate that concentrations exceed cleanup levels.

ND(0.29) Not detected at reporting limit indicated in parentheses.

-- Indicates no cleanup level identified in CAP.

mg/kg Milligrams per kilograms

Results outlined in a box indicate that concentrations exceed cleanup levels.

ND(0.29) Not detected at reporting limit indicated in parentheses.

PROGRESS REPORT
BUILDING 1065 AREA CORRECTIVE ACTION PLAN IMPLEMENTATION
PRESIDIO OF SAN FRANCISCO, CALIFORNIA
Groundwater Monitoring

Weeks Ending: June 8, August 10-August 31

Summary of Work Performed

- June 7, 2007 – Well 1065MW103A was sampled by Treadwell and Rollo, Inc. A copy of the groundwater sampling form is attached.
- August 7, 2007 - MACTEC obtained results from the First Quarter 2007 groundwater sampling event and June 7, 2007 groundwater sampling event. These data represent baseline groundwater data prior to excavation of soil from RU-A. Copies of the groundwater data tables are attached.
- August 2007 - MACTEC reviewed the First and Second Quarter 2007 monitoring data to assess whether there were any significant differences in chemical concentrations or field measurements between these most recent groundwater monitoring events and historical groundwater monitoring data. Results of the evaluation are presented in the attached memorandum.

Issues and/or Scope Deviations and Resolution

- First and Second Quarter 2007 groundwater monitoring data from wells and piezometers downgradient of RU-A show relatively lower concentrations of chemical concentrations than have been detected in the last three quarters of groundwater monitoring.
- Analytical results for the newly installed well 1065MW103 show that groundwater COCs; TPHg, benzene, and arsenic; were not detected in 1065MW103.
- First and Second Quarter 2007 monitoring results do not suggest the need to re-evaluate the recommended rates for application of oxygen releasing compound estimated in the Corrective Action Implementation Work Plan.

Project Milestones Achieved

- Well 1065MW103A was sampled and results reviewed.

Work planned:

- Monitoring Well 1065MW103A was sampled a second time in Third Quarter 2007 and onsite wells will be sampled following completion of excavation activities at RU-A. Analytical results will be reported in the Completion Report.

PROGRESS REPORT
BUILDING 1065 AREA CORRECTIVE ACTION PLAN IMPLEMENTATION
PRESIDIO OF SAN FRANCISCO, CALIFORNIA
Excavation Activities

Weeks Ending: October 19 and 26, 2007

Summary of Work Performed

- Mobilization of equipment and materials to site including bobcat, 2 excavators, one dump truck, conex box, scaffolding, trench shoring, generator, wood for column replacement, and 20,000-gallon water storage tank.
- Erection of fencing.
- Saw cut and removal of asphalt from Areas 2 and 3.
- Saw cut and removal of concrete around roof support columns.
- Removal of wood planks from mezzanine.

Issues and/or Scope Deviations and Resolution

- Sprinkler system located on mezzanine supplies water to sprinkler system on roof, which fire department requires to remain in place and active. Water supply to sprinkler system needs to be re-routed.

Project Milestones Achieved

- Asphalt removal completed in Areas 2 and 3.

Work planned:

- Excavation in Area 3 to commence on Monday October 29, 2007.

Date: 10/19/07

Notes by: Scott Graham

Materials onsite trench plates, generator, wood for support ~~replacement~~

Field Notes: Onsite 630 - Left office 530

Alberto from ERRG onsite at 7am

Open up building, Tyson Appel (ERRG) onsite 710-740

Concrete on S side of building (excavation Area 3) has been removed & 4' square of concrete has been sawcut & broken up (not removed yet) around 16 support columns

~~Meet~~ Discuss start up work (Groundbreaking scheduled for 10/24/07) w- Tyson
- First day will be setting up the trench plates, start excavation
2nd day, schedule 1st Lab Courier (Gentively) for the 3rd day (Wednesday)

Discuss Mezzanine removal - ERRG got approval to remove Mezzanine from 2nd post ~~West~~ (from west wall) to the eastern wall, however Live sprinkler system (under Mezzanine) is in the way & needs to be disconnected
The Fire dept gave approval but wants sprinkler system on the roof to remain active

Electrical line between building 1062 (NW corner) & bldg 1063 is active & will remain in place (1' Powers the east side of Bldg 1063) - have to be aware of when moving equipment as it hangs fairly low

Alberto removing concrete from around the support columns & loading into bobcat bucket

I depart to pick up some paperwork at Baker Beach at 8am, return at 835

Tyson back at 837, Brand scaffolding onsite 830 to drop of scaffolding for temp roof support while replacing ~~Rotten~~ Wooden support beams

Concrete pad is average 6" thick

9am - Dan Beste onsite with holding tank (≈20,000 gallon) - Departs 912

James (ERRG) onsite 905, Ryan (Trust) onsite 910

925 - Discuss safety issues, future safety meeting, visitors/inspectors, Demo

All support columns are to be removed, if inspector around - will stop work

Daily Field Logs Sheet 3 of 3

Project Name: Building 1065 Area CAP Implementation **Job #** 408407511-5 **Task:** 02.4

Date: 10/19/07

Notes by: Scott Graham

Materials onsite

Field Notes: Talk to Mary Jo regarding dust/lead monitoring
Brand Scaffolding departs 930
Discuss potential electrical hazards, scaffolding + fall protection, shoring in Area 3
Sprinkler system has to be rerouted because the one under the mezzanine supplies the sprinklers on the roof (which the fire dept wants to keep on)
Discuss Excavation Area 2 + relocation of it compared to survey marks
Not doing buttresses anymore - See new construction plan
Given 2 copies of construction plan, supplemental geotechnical design calculations + the health + safety plan from EBRG - all dated October 2007 + 1 cd of the submittals
Ryan departs 1025
Depart 1045

Inside of Building 1063, showing mezzanine to be removed and saw cut concrete around roof support columns; view looking north.

20,000 gallon holding tank located west of former Building 1065; view looking northeast.

Inside of Building 1063. Top of roof support scaffolding

Excavation Area 3 on south side of Building 1063; view looking east.

PROGRESS REPORT
BUILDING 1065 AREA CORRECTIVE ACTION PLAN IMPLEMENTATION
PRESIDIO OF SAN FRANCISCO, CALIFORNIA
Excavation Activities

Week Ending: November 2, 2007

Summary of Work Performed

October 29, 2007

- Set up stockpile storage area.
- Excavated an approximate area 84 feet long, 17 feet wide, and 3 feet deep from Area 3 on the south side of Building 1063. Groundwater with odor encountered at approximately 3.5 feet bgs in the excavation.
- Found and capped a PVC pipe running east-west approximately 1 foot north of the sanitary sewer manhole on the east side of Excavation 3.
- A 12-inch diameter metal casing with wood inside was encountered in the central portion of Excavation 3; believed to be conductor casing from an abandoned well.
- A 4-foot deep vault was encountered on the west end of Excavation 3. The vault was covered by a metal plate. The upper 1 foot of the vault comprised concrete, the bottom 3 feet comprised brick. A 8-inch diameter clay pipe and a 4-inch diameter metal pipe entered the sump at 2 feet bgs. At 4 ft bgs, a 12- inch diameter clay pipe entered the sump.
- Began installation of shoring in Excavation 3.

October 30, 2007

- ERRG removed the metal casing from the excavation; the casing was 18.5 feet long.
- Site visit by NPS and Water Board.
- Completed installation of shoring in Excavation 3.
- Began dewatering Excavation 3.
- Collected confirmation soil samples 1065EX350 through 1065EX356 plus one duplicate sample, one equipment blank, and one trip blank.

October 31, 2007

- Removed and excavated soil from around pipes leading from former sump at west end of Excavation 3.
- The two pipes encountered in the upper 2 feet of the sidewalls at the west end of the excavation were removed - the 4-inch diameter metal pipe was 6 feet long and the 8-inch diameter clay pipe was 3 feet long. Black soil was encountered in the pipes with no PID readings. Both pipes angled to the south terminating at the approximate former Phase I IA excavation boundary. The lower 12- inch diameter clay pipe (assumed to be a former sewer line) extended to the west. Approximately 35 feet of clay piping was removed from an approximate 5 foot deep excavation.
- Collected sample 1065DE210 from discharge water contained in the storage tank. Tank contained approximately 8,000 gallons of water.
- Allied Concrete backfilled the hole where the metal casing was removed from the eastern portion of the excavation by pumping a 4-sack cement/sand slurry down the hole the pump hose was gradually pulled up as the hole was grouted. The hole was backfilled at an approximate depth of 14 feet below the pavement surface or 10 feet below the bottom

of the excavation. The grout went into Bay Mud effectively sealing off the conduit between the upper and intermediate groundwater zones.
- Collected confirmation soil samples 1065EX357 and 1065EX358 plus one duplicate sample, rinsate blank, and trip blank.

November 1, 2007
- Continued excavation dewatering.
- Trust indicated that confirmation soil samples from the piping overexcavation area would be collected at the same frequency as samples collected from Excavation 3; because the piping excavation would be considered an extension of Excavation 3. Samples were collected based on a 25-foot grid spacing.
- Collected confirmation soil samples 1065EX359 through 1065EX362 from the piping excavation following a 25 foot grid spacing.

Issues and/or Scope Deviations and Resolution

- Well conductor piping encountered and removed from Excavation 3. The borehole was grouted to reduce potential cross-contamination between shallow and intermediate groundwater zones.
- A sump was encountered in the west end of Excavation 3 and removed. Approximately 35 feet of clay piping that entered the sump was removed and confirmation samples were collected from the piping over-excavation at 25 foot intervals. The piping was removed as it was considered a potential source of contaminants.
- The sample from the storage tank containing water from dewatering the excavations was not analyzed for volatile organic compounds (VOCs) by 8260B in accordance with Table 4-1 of the work plan because VOCs were not listed compounds on the Presidio Industrial User Class II Waste water permit. This would represent a deviation from the work plan.

Project Milestones Achieved

- Began excavation and confirmation sampling of Area 3.

Work planned:

- Dewater and excavate soil to Bay Mud and collect bottom samples from Excavation 3.
- Pending results of 1065DE201, discharge water from storage tank to sanitary sewer.

Discussion Points for Next Stakeholder Meeting

- Progress reports will be submitted weekly. Verify need to submit progress reports on a weekly basis if no work is performed or if progress reports for multiple weeks can be combined
- Deviation from work plan - no analysis of dewatering samples for VOCs
- Adequacy of sidewall sampling from Excavation 3, based on configuration with piping over-excavation on west end.

Attachments
1. October 29, 30, 31, and November 1, 2007 Field Daily Logs
2. Photographs

Set up of soil stockpile area, view looking southwest.

12 inch diameter metal casing in Excavation 3.

Date: 10/29/07

Notes by: Scott Graham

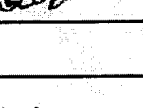
Materials onsite Shoring, Sonotube, wood for new building supports

Field Notes: Onsite 715 - Alberto onsite already
Tyson + James onsite 720
The Floor boards have been removed from the Mezzanine but the mezzanine Framework not removed yet because the Fire dept requires that the sprinkler system remain active above + they have not been able to schedule them for diversion yet
Concrete from around the supports has been removed + sonotubes 48" down delivered
ERRG performing vehicle/equipment inspections
Try to calibrate OVM Unit #1 - Unit is not working - pick up new one at office tonight
ERRG Lays plastic down in future soil stockpile area - 745
755 - Jason Gulbranson from ERRG Onsite
8 - conduct site safety meeting / discuss todays work
830 - Begin Excavation
Find + cap 6" PVC pipe traveling E/W approx 3' N of ~~Storm drain~~ sewer Manhole on East side of Excavation
Clear near Foundation on East side to determine foundation configeration
East end of Excavation in line with West side of ~~storm drain~~ sewer Manhole + West side of double door entrance
Fill is a mix of sand, clay, silt, gravel + brick
Water coming in excavation at 3.5 ft, Define odor in soil around 3.5'
Foundation is 2' deep (1.5' + 0.5' slab) + 6" T section on bottom so 6" thick on top 2' + then 18" wide for 6" for a total 2.5' deep foundation



Excavation approx 17' wide (NS) so it will be approx 15' wide with the shoring in place
1035 - Go to Baker Beach trailer to p/u more sample containers dropped off from the Lab - return 1115 - BB crew used my supplies - need to reorder

Project Name: Building 1065 Area CAP Implementation **Job #** 408407515 **Task:** 02.4

Date: 10/29/07

Notes by: Scott Graham

Materials onsite

Field Notes: 1120 - call Lab to reorder supplies & schedule sample p/u for tomorrow at 3pm

1125 - Ryan onsite, Ryan Departs at 12

Run into what appears to be old pier - 12" metal casing with wood inside

Plan is to get full excavation to ≈ 3.5 ft bgs & construct shoring - Shoring should be complete be end of day tomorrow

Lunch 1210 - 1240

1300 - load of drain rock delivered

Go thru sample schedule & make Labels for tomorrows sampling

1445 - receive phone call from Mary Jo to discuss job progress - run all samples for full suite (wasn't sure if samples under foundation should only be run for a shorter, pre-lim List)

The vault on the ~~East~~ West side of Excavation Area 3 (covered by a Metal plate) was 1' concrete (pictures 60-62) with a brick ~~vault~~ sump? about 3' under it (total 4') several pipes filled with black mud (pictures 68-73) Lead into that vault very strong odor in the water & soil in this area, soil is very black

Dig west end a bit more, hit gravel on south side (fill of former Bldg 1065 ex) & water comes into the current ex (old ex, acting like a bathtub)

18" clay & one 6" metal coming in at approx 2' bgs & one 10" clay on bottom @ approx 4' bgs

Ryan Onsite 1515 - would like us to chase the pipes coming in to the west end of the excavation - Departs 1530

Mark Foundation in 10' increments for sampling grid - ex currently 84' Long x 17' wide from SW corner of building

1600 - 2nd Load of Drain rock arrives, Finish ex for day, begin building shoring

12 Drums of soil cuttings - from well destruct are being stored in Bldg 1063 - are we to remove with excavation soil?

1630 - Call office to get PID that works & charged before people leave for the night

Daily Field Logs Sheet 4 of 4

Project Name: Building 1065 Area CAP Implementation **Job #** 408407515 **Task:** 02.4

Date: 10/24/07

Notes by: Scott Graham

Materials onsite

Field Notes:

Excavation not wide enough (about 6" to narrow) for 15' spreaders on shoring - Dismantle & need to excavate more tomorrow

ERRG going to finish dismantle & lock up site & plans to leave around 1730

1715 - I Depart site

1830 - at office

Scan Paperwork & download photos

Imported Backfill Truckloads or Cubic Yards Ø Bills of Lading Attached Yes No

Project Name: Building 1065 Area CAP Implementation **Job #** 408407511.5 **Task:** 02.4

Date: 10/30/07

Notes by: Scott Graham

Materials onsite

Field Notes: Onsite 645, Alberto + James onsite
Tyson, Jason, + Rafael arrive 655-705
Tailgate safety meeting, discuss todays work 715am
Measure building dimensions, Map out ex area, + set up sampling grids
- Determine Foundation is 8" thick on top section (not 6" as in notes yesterday)
Calibrate PID-805, Collect samples 350-353 + IDW + IMS/MSD
1010 - ERRG Finishes setup + placement of 1st shoring section on East side of ex 3 - Begins 2nd section
ERRG pumped some water from west end of excavation - ran pump for 2 hours
1030 Ram Onsite
1040. ERRG removes unknown pier found yesterday in appears to be a grouted up well in 12" conductor casing - 18.5' deep
ERRG ~~is going to~~ suggested install pipe + gravel + make former well into a sump for removing water from the ex - we should probably fill with grout as
Depart 1055 for 11am Trust holds meeting \ it punches thru the bay mud
RWQCB + Brian concur that we need to tremie the hole ASAP
1215 - return to site w Ryan, Ram, Brian + Devender to show them work done + discuss future work - They all depart 1235
Redraw site map + place sample locs + site features on map
Collect equipment blank
1400 - finish 2nd shoring segment start on 3rd
ERRG scheduled concrete with sand/cement grout to be delivered tomorrow to fill the hole where the 18.5' conductor casing was - earliest we could schedule
Tony - C+T courier picks up samples 350-356 + EB + TB
Call Lab to schedule p/u @ 3pm tomorrow
1600 - Finish 3rd Shoring Section, start on Section 4

415-672-1567
Tony

Daily Field Logs Sheet 3 of 3

Date: 10/30/07

Notes by: Scott Graham

Materials onsite

Field Notes: √ Thru sample containers to see if I have the right sample containers for the discharge samples - Don't need 1-Lambers-w HCL, 100-mL plastics, + 0.5L plastics with NAOH - They were supposed to be dropped off today but courier could not find trailer at BB so they will be delivered here tomorrow

Take photos of site

1730 ERRG still trying to assemble last shoring segment - They have one side of Z spreader still to hook up - They estimate 15-30 min to finishing - They are going to stay + finish tonight

1740 - Depart Site

1850 - at office - 89 miles

Notes by: Scott Graham

Materials onsite

Field Notes: 655 - onsite, Alberto onsite, James onsite at 700
They finish up at about 6pm last night - finished the shoring
The plan for today is to set up the pump & pump more water so I can sample it this afternoon - we pumped about 5K gallons yesterday & chase out the pipes on the west end of the ex
Daily site safety meeting @ 720
Calibrate PID, set up decon station
745 - Alberto begins potholing west end of excavation to create area to pump water from
800 - Prepare & begin sampling sidewalls
840 - Begin pumping water from ex cavation
Begin chasing pipes at 9am at west end of Ex 3
Top metal pipe is 4" diameter & approx 6' long with many holes, very rusty
top (2' bgs) clay pipe is 8" OD & approx 3' long - both were filled with black dirt with no discernable odor or PID reading & did not have black earth in the surrounding native
The bottom (4' bgs) clay pipe is approx 12" OD & is different type clay than the shallower one, also filled with black soil that appears to be only in the pipe (no leakage from in surrounding soils) - Water poured out of pipe when encountered
bottom pipe appears to run more parallell to building & may be continuous - the top 2 angled to the south & encountered the old excavation (TA) - I were broken off previously
1015 Rafael (ERRG) onsite
Ryan onsite 1020 - 1045 - He wants us to keep chasing the pipes + wants the N+S sidewall samples on standard TAT as we are not going to need the results for awhile
Mary Jo called - We are running TPHg w encores so I need to take 3 more + 9 more for MS/MSD sample

Daily Field Logs Sheet 3 of 4

Project Name: Building 1065 Area CAP Implementation **Job #** 408407.5115 **Task:** 02.4

Date: 10/31/07

Notes by: Scott Graham

Materials onsite

Field Notes: I Need to collect 3 more from sample Loc 357 & put 356 on standard TAT

Modify COCs to reflect changes

1115 - Another call from Mary Jo - need 3 TBs & EB needs 1065 to start with 2nd Ex removed - she also requested 4.0 for depth instead of 4

Note: encores NOT collected for Ex 358 as it was in gravel road base & Ryan said no

Change COCs & sample Labels to reflect changes

I have 221 encore samples left - going to use at least (9x6)+36 = 96 for Ex 3 (+6) 72 for Ex 2 & 128 for Ex 1 assuming no more overex ≈ 300 - 80 short

Andrew Nolan onsite at 1240 to drop off sample containers for the discharge samples (dropped off at Baker Beach) - gave him the stainless steel plates

Called the Lab to discuss sampling & todays pick up - Steve says I only need 9 encores for the MS/MSD not 18 - I will get 12 to make sure we have enough

1315 Finish chasing pipe to approx 35ft west of excavation edge - pipe is still going - traveling under parking lot we will cap at 35

Discuss trench sampling & sketch trench

Go through sample containers & prep for sampling of holding tank & Dup

1430 collect samples - Approx 8000 gallons currently in tank

Put icechest out in preperation of courier coming while finishing up COC & taking a call from Mary Jo & the courier picked up the samples & left w/o the COCs - The icechest is gone (hopefully to the lab) - Called the Lab to let them know - Will Fax/email chains to Lab when I get back to office

Mary Jo told me that I do not have to designate a sample for Lvl IV Data Validation - Kristen & her will do that

Steve Stanley CH

Materials onsite

Field Notes: Onsite 705, Alberto onsite
Set up sampling station, Alberto performs vehicle checks
Calibrate PID, James onsite at 730
Safety Meeting 745
810- Begin sampling trench
Alberto is pumping water & putting gravel behind shoring, James picking up materials
1005 - Ryan onsite while I was prepping to collect sample 361
He questioned the sampling protocol (in regards to sample location & # of samples to be collected in trench) & wether trench should be considered as seperate or as part of the ex
He wants to discuss with Mary Jo & possibly have a meeting with Devender & Brian to determine # of samples, sample locations & decide on any further excavation of trench
No more sampling until I here from him or Mary Jo
May not run the samples I collected earlier (359 & 360)
Ryan Departs 1020
Redraw site map for trench area as it has changed a little with clean up (removing stuff)
Take photos of site & Log Photos taken earlier
1115 - Approx 12,000 gallons of water in holding tank
1130- receive voice mail from Ryan - he would like me to not use the samples I collected earlier - he considers the trench a continuation of the excavation & ~~would like~~ as such, would like to collect only one more sidewall sample on the north, one sample on the south sidewall, 1 bottom & level
We were treating the trench as a seperate trench that needs a sample every 20 linear feet - which would mean 2 North sidewall, 2 South SW, & 2 bottom samples

Ryan [redacted] 707-338-3223

Project Name: Building 1065 Area CAP Implementation **Job #** 408807S115 **Task:** 02.4

Date: 11/1/07

Notes by: Scott Graham

Materials onsite

Field Notes: Ryan feels that is too many samples + one bottom + one in each sw would be sufficient to evaluate to potential ~~see~~ contaminants in the soil
This would mean I would put the samples I collected earlier on hold or dispose of them + collect new samples
I call Mary Jo + leave her a voice mail on her home + cell lines to see if the # Ryan requested is sufficient
Want to make sure there is agreement before proceeding either way
1220 - Received another call from Ryan he would like me to proceed treating the trench as part of the excavation, he suggested throwing out the samples I collected earlier + restarting the numbering, Put samples on Standard TAT
1225 - Called Mary Jo + left her a voice mail to let her know what is going on + proceed with sampling
1310 - Receive call from Mary Jo - she is checking contingency plan
1340 - Recive call from Mary Jo - proceed as indicated by Ryan
Collect samples 359-362, + MS/MSD, DUP + Equipment Blank
359 (North Sidewall) + MS/MSD, 360 (South SW) + Dup, 361 (West end + SW), 362 (Bottom)
Map Sample Locations
Tony called - He is not scheduled for pickup today - Call C+T to check on courier that was supposed to be here at 3pm - is now 3:30
Tony will now be here at 4pm - he is here at 1555 - sample picked up
Alberto securing site for weekend, James Departed at 1500
All Depart 1630

PROGRESS REPORT
BUILDING 1065 AREA CORRECTIVE ACTION PLAN IMPLEMENTATION
PRESIDIO OF SAN FRANCISCO, CALIFORNIA
Excavation Activities

Week Ending: November 8, 2007

Summary of Work Performed

November 5, 2007

- ERRG excavated soil from Area 3 down to Bay Mud at approximately 6 to 7 ft bgs.
- Soil at 4 feet bgs displayed a strong odor.
- A 12 inch diameter clay pipe (with wood beneath) was encountered at 4 ft bgs; appeared to run east to west from the former sump location.
- Placed gravel behind the shoring panels.
- Continued dewatering the excavation.
- Extended and bermed the stockpile area.
- Site visit by Presidio Fire Department to evaluate building sprinkler system.
- Site visit by Pribuss Engineers to develop bid for sprinkler system re-route.

November 6, 2007

- On the basis of analytical results from 1065DE210, Ryan Seelbach of the Presidio Trust authorized ERRG to discharge water from the water storage tank to the sanitary sewer.
- ERRG pumped water from the holding tank through a sock filter into the sanitary sewer manhole located at the southeast corner of Excavation 3. The average rate of discharge was approximately 69 gallons per minute.
- Continued excavating Area 3 to Bay Mud.
- Finished placing gravel behind the shoring panels.

November 7, 2007

- Continue dewatering Excavation 3.
- Collected samples 1065EX363, 1065EX364, and 365 from the bottom of Excavation 3.
- Continue discharging by gravity flow to sanitary sewer.
- Continue excavating to Bay Mud.
- Electrical safety inspection by Presidio Trust electrician.

November 8, 2007

- ERRG cleaned out soil under spreaders.
- Completed excavation in Area 3.
- Concrete and asphalt loaded for recycling.

Issues and/or Scope Deviations and Resolution

- None identified.

Project Milestones Achieved

- Completed excavation and confirmation sampling of Area 3.

Work planned:

- Begin excavating Area 2 on north of Building 1063.

Discussion Points for Next Stakeholder Meeting

- Analytical results from confirmation soil samples.
- Adequacy of sampling within Excavation 3.

Attachments

1. November 5, 6, 7, and 8, 2007 Field Daily Logs
2. Photographs
3. Summary of soil confirmation sampling results
4. Level II data validation reports
5. Site plan

Excavation of western end of Excavation 3, view looking west.

Gravel placed between shoring and south wall of Building 1063, view looking east.

East sidewall of Excavation 3, depth 4 to 6 feet bgs, view looking northeast.

Excavation 3, showing groundwater in west end of excavation, view looking east.

Discharge to sanitary sewer on November 6, 2007, showing filter, and discharge set up, view looking south.

Filter and inlet into holding tank, view looking south.

Shallow storm drain pipe leading into the west side of Excavation 3, view looking northeast.

Covered soil stockpile on November 8, view looking northeast.

Excavation Area 3 as completed on November 8, 2007, view looking west.

PROGRESS REPORT
BUILDING 1065 AREA CORRECTIVE ACTION PLAN IMPLEMENTATION
PRESIDIO OF SAN FRANCISCO, CALIFORNIA
Excavation Activities

Week Ending: November 16, 2007

Summary of Work Performed

November 12, 2007

- ERRG excavated soil from Area 2 down to 7 feet bgs.
- MACTEC collected sidewall and bottom samples from Area 2 and submitted them to the laboratory.
  .
- Continued dewatering excavation Area 3.
- MACTEC sketched east, west, and north excavation sidewalls of Area 3 and west sidewall of Area 2.
- Total of 29,300 gallons discharged since start of job (totalizer reading 5,186,100)

November 14, 2007

- ERRG conducted over-excavation of southern sidewall, west side of the excavation Area 3 near the reported exceedance (1065Ex360) to approximately 12 feet south of the building (one foot removed).
- MACTEC collected a sample of the IA gravel at the new sidewall (all native/old fill materials removed from this area)
- MACTEC collected a sample of the eastern sidewall of Area 3 near previous soil sample 1065Ex357[4.0] which had a reported exceedance for acetone. Sample was put on hold pending data validation of 1065Ex357[4.0]
- Total of 40,600 gallons discharged since start of job (totalizer reading 5,197,400)

Issues and/or Scope Deviations and Resolution

- None identified.

Project Milestones Achieved

- Completed excavation and confirmation sampling of Area 2 and overexcavation of Area 3.

Work planned:

- Over excavate east and west sidewalls and bottom of excavation Area 2 on the north side of Building 1063.

Discussion Points for Next Stakeholder Meeting

- Analytical results from confirmation soil samples.

Attachments

1. November 12 and 14, 2007 Field Daily Logs
2. Photographs
3. Summary of soil confirmation sampling results
4. Level II data validation reports
5. Site plan

Excavation Area 2 – Looking at northwest corner from southeast corner, excavation approximately 7 feet deep

Excavation Area 2 – Looking at southeast corner from northwest corner, excavation approximately 7 feet deep

West end of Excavation Area 2, Looking East, showing south sidewall (right side) that has been expanded to the gravel from the IA excavation, Bottom of excavation approximately 6 feet bgs, partially filled with gravel

PROGRESS REPORT
BUILDING 1065 AREA CORRECTIVE ACTION PLAN IMPLEMENTATION
PRESIDIO OF SAN FRANCISCO, CALIFORNIA
Excavation Activities

Weeks Ending: November 23 and 30, 2007

Summary of Work Performed

WEEK ENDING NOVEMBER 23, 2007

November 19, 2007

- No field work performed.

November 20, 2007

- No field work performed.
- Teleconference call held with MACTEC, Trust, ERRG, and Water Board to discuss analytical results for over-excavation of the western end of Excavation 3 and initial confirmation sample results from Excavation 2.

November 21, 2007

- ERRG excavated additional soil from the north, east, and west sidewalls of Excavation 2. Approximately 1.5 feet of soil was removed from the northern and eastern sidewalls and 2.5 feet of soil was removed from the western sidewall.
- MACTEC collected sidewall samples 1065EX346, 1065EX347, and 1065EX348 from Excavation 2 and submitted them to C&T on a 48 hour TAT for TPH fuel oil, TPH diesel, and PAHs.
- Pump not in operation. Totalizer reading 5,199,600.

November 22 and 23, 2007

- No field work performed.

WEEK ENDING NOVEMBER 30, 2007

- No field work performed.

Issues and/or Scope Deviations and Resolution

Issue

- Elevated levels of polynuclear aromatic hydrocarbons (PAHs), specifically benzo(a)pyrene, detected in sidewall samples from Excavation 2 may be related to contaminated fill associated with Fill Site 6B and not from releases from FDS lines or the former USTs. Excavation 2 is near the investigation area for Fill Site 6B. The Water Board can only direct remediation of petroleum related contamination and that fill-related contamination should be addressed by DTSC.

Resolution

- The Trust will over-excavate soil at the location of the sample containing TPH fuel oil above the cleanup level and will remove soil from the sidewalls where benzo(a)pyrene exceeded cleanup levels and collect confirmation samples. If this one round of over-excavation does not remove soil containing PAHs above cleanup levels, then the Trust will consider addressing this area as part of Fill Site 6B. The Trust will discuss this approach with DTSC (Bob Boggs).

Project Milestones Achieved

- Excavated additional soil from the western, northern, and eastern sidewalls of Excavation 2 and collected confirmation soil samples.

Work planned:

- Backfill Excavation 3 and Excavation 2 if confirmation results from Excavation 2 over-excavation show TPH below cleanup levels.

Discussion Points for Next Stakeholder Meeting

- Confirmation soil sample analytical results from over-excavation of Excavation 2.

MINUTES
WEEKLY PROGRESS MEETING
BUILDING 1065 AREA CAP IMPLEMENTATION
PRESIDIO OF SAN FRANCISCO, CALIFORNIA
November 20, 2007

Attendees: Ryan Seelbach and Genevieve Coyle, Presidio Trust
Devender Narala, Regional Water Quality Control Board
Tyson Appel, ERRG
Scott Graham and Mary Jo Heassler, MACTEC
Meeting held by teleconference.

Purpose of Meeting: Update on status of remedial construction and results of excavation confirmation sampling at the Building 1065 Area - (vicinity of Building 1063).

Discussion Points

- Distribution of progress report for the week ending November 16, 2007 and analytical results for excavation confirmation sampling (provided by e-mail as a figure showing sample locations and results for samples and analytes with detected concentrations exceeding cleanup levels).
- Sidewall of Excavation 3 was over excavated at the location of the duplicate sample from sample 1065EX360 which contained TPH as fuel oil (fo) at 400 mg/kg, exceeding the cleanup level of 160 mg/kg.
- The confirmation soil sample collected from the over-excavated sidewall (1065EX367[4.0]) showed that TPHfo was detected at 5.6 mg/kg, indicating that soil containing TPHfo above cleanup levels had been removed from the western portion of Excavation 3.
- Soil on the north sidewall of Excavation 3 where TPHfo, diesel, and gasoline exceed cleanup levels will be removed when soil is excavated from Area 1.
- D. Narala indicated that once soil had been over-excavated that the sample exceedance shown on the figure should not be shown with highlighting.
- Soil was excavated from Area 2 and confirmation sampling shows that detected concentrations of the polynuclear aromatic hydrocarbon (PAH) benzo(a)pyrene and TPH fuel oil are above cleanup levels in three sidewall samples. PAHs may be related to contaminated fill associated with Fill Site 6B.
- Excavation 2 is near the investigation area for Fill Site 6B. Sampling to date at Fill Site 6B shows TPHfo below 200 mg/kg and similar concentrations of PAHs.
- T. Appel indicated that the fill material in Excavation 2 was different from that encountered in Excavation 3 on the south side of the building.
- D. Narala indicated that the Water Board would only direct remediation of petroleum related contamination and that fill related contamination should be addressed by DTSC.
- It was agreed that the Trust would over-excavate soil at the location of the TPHfo exceedance and would remove 1 to 3 feet of soil from the sidewalls where benzo(a)pyrene exceeded cleanup levels and collect confirmation samples. If this one round of over-excavation did not remove the PAH exceedances, then the Trust would consider addressing this area as part of Fill Site 6B. The Trust would discuss this approach with DTSC (Bob Boggs).
- Confirmation samples collected from the over-excavated area would be analyzed for the suite of compounds which showed the exceedance - TPH fuel oil and diesel and PAHs.

Agreements:

- The north west and east sidewalls of Excavation 2 will be over-excavated and confirmation samples will be analyzed for TPHfo, TPHdiesel, and PAHs.
- The figure will be revised so that the over-excavated samples will not be identified with highlighting.
- The Trust will discuss with DTSC the plan to include the northern of the site into Fill Site 6B.

Action Items

MACTEC

- MACTEC will observe and collect confirmation samples from Excavation 2 on November 21, 2007.
- The figure will be revised so that over-excavated samples are not highlighted.

Trust

- Discuss the plan to include the northern part of the site as Fill Site 6B with DTSC.

PROGRESS REPORT
BUILDING 1065 AREA CORRECTIVE ACTION PLAN IMPLEMENTATION
PRESIDIO OF SAN FRANCISCO, CALIFORNIA
Excavation Activities

Week Ending: December 7 and 14, 2007

Summary of Work Performed

WEEK ENDING DECEMBER 7, 2007

- No field work performed.

December 7, 2007

- Conference call with Water Board and DTSC to discuss confirmation analytical results and request to backfill Excavations 2 and 3. Based on meeting, Excavations 2 and 3 can be backfilled. DTSC suggested that filter fabric be placed on the west sidewall where confirmation samples show polynuclear aromatic hydrocarbons (PAHs) above cleanup levels. Following completion of petroleum cleanup, the Fill Site 6B boundary will be re-drawn to include the west sidewall sample and any others that exceed for non petroleum compounds that are left in-place.

WEEK ENDING DECEMBER 14, 2007

December 12, 2007

- ERRG oversaw the pre-backfill survey of the excavation dimensions and soil sample locations for Excavations 2 and 3.
- Pump not operating. Water level at approximately 6 feet below ground surface (bgs) in Excavation 2 and 5 feet bgs in Excavation 3.
- Total of 47,578 gallons discharged since start of job (totalizer reading 5,204,378).

December 14, 2007

- Technical meeting to develop strategy for addressing residual contamination in sidewalls of Excavation 3 and potentially excavation at Area 1. Summary of pertinent issues summarized below.

Issues and/or Scope Deviations and Resolution

Some contamination may be left in place in soil north of the limits of Area 1 excavation (planned excavation inside of Building 1063). A technical meeting was held on December 14, 2007 to evaluate options to address petroleum impacted soil that may potentially be left in place west of Area 1. These options included:

1. Application of ORC on the north sidewall of Excavation 3 by mixing ORC with backfill
2. Installation of perforated piping along the northern wall of Excavation 3 prior to backfilling; and injection of ORC after backfilling and excavation of soil from Area 1, as necessary
3. Injection of ORC west of Area 1 by direct push methods, as necessary after excavation of soil from Area 1.

Option 3 was considered the most effective approach as application through direct push injection will distribute ORC directly into affected soil. In addition, after completion of excavation of soil from Area 1, there will be a better understanding of the location and extent of residual contamination, and there will be an opportunity to evaluate the need for ORC application if residual hydrocarbon contamination remains above cleanup levels in soil in Area 1.

Project Milestones Achieved

- Completed pre-backfill survey of excavation dimensions and soil sample locations for Excavation Areas 2 and 3.

Work planned:

- Backfill Excavations 2 and 3.

No work since last visit

Water in Excavation at aprox 5' bgs in Ex Area 2 + 6' bgs in Ex Area 2

Totalizer Reading at: 5,204,378 gallons

945 - James calls surveyor - he forgot about appointment - can be here a 130pm

Discuss Job with James - Give him a map + sample tracking sheet to give to the surveyor

Call Mary Jo + leave a Message to see if I need to come back at 130

Depart 1005

PROGRESS REPORT
BUILDING 1065 AREA CORRECTIVE ACTION PLAN IMPLEMENTATION
PRESIDIO OF SAN FRANCISCO, CALIFORNIA
Excavation Activities

Weeks Ending: December 21 and 28, 2007 and January 4 and 11, 2008

Summary of Work Performed

WEEK ENDING DECEMBER 21, 2007

DECEMBER 17, 2007

- ERRG set up sump pump in Excavation 3 and began pumping to draw down water before backfilling.

DECEMBER 19, 2007

- ERRG installed woven filter fabric on the north side of Excavation 3 to demark the northern excavation limits prior to backfill
- MACTEC collected a sample from the sediment inside the 12-inch diameter clay pipe. The pipe formerly connected to the sump removed from Excavation 3. The pipe runs west into the parking lot which is used as the soil management area. Sample was submitted to the laboratory for analysis for all site chemicals of concern. Pipe was capped with concrete before backfilling.
- Cleaned out westernmost area of Excavation 3 (outside of the shoring) which had partially collapsed and slumped.
- Drain rock was laid in the excavations (Excavations 2 and 3) to bridge the groundwater in the bottom of the excavation (from total depth to approximately 5 to 6 feet bgs).
- Placed AB (road base) on top of drain rock in westernmost section of Excavation 3 in 8-inch lifts with 95% compaction.
- Water pumped from excavation. Totalizer reading at 5,219,900 gallons (total purged since start of project is approximately 63,100 gallons).

DECEMBER 20, 2007

- No work performed due to heavy rains the night and morning of December 19, 2007.

DECEMBER 21, 2007

- Competed backfill and compaction of westernmost portion Excavation 3 outside of the shored area.
- Backfilled westernmost 20-foot shoring section with AB in 6-inch lifts to a minimum of 95% compaction.
- No water pumped from excavation. Holding tank approximately 25% full.
- Totalizer reading at 5,239,840 gallons (total purged since start of project is approximately 83,040 gallons)

WEEK ENDING DECEMBER 28, 2007

DECEMBER 24, 2007

- ERRG attempted to continue backfill activities in Excavation 3, but AB material exceeded optimal moisture content for proper compaction.
- ERRG spread backfill material out south of Excavation 3 to dry.

DECEMBER 25, 2007

- No work performed due to the holiday.

DECEMBER 26, 2007

- Top 8-inches of backfill that was spread out was sufficiently dry to use as backfill. The remaining backfill was too wet for proper compaction.
- ERRG used what backfill material was sufficiently dry to backfill the western end of Excavation 3 (between the shoring) to approximately one foot bgs and removed the westernmost section of shoring.
- ERRG began compacting the next shoring section. Excavation was backfilled to approximately 4 feet bgs.
- More AB material was needed to complete backfilling of Excavations 2 and 3. Quarry was closed until January 2nd. Backfilling activities were put on hold until January 2nd when more backfill material can be delivered.
- Pump was removed from excavation and holding tank was empty. Total of 90,044 gallons discharged since start of project (totalizer reading 5,246,844).

DECEMBER 27, 2007

- Fire suppression system reroute scheduled to begin inside the building. Re-route expected to take 2 to 3 days to complete.

WEEK ENDING JANUARY 4, 2008

- Short work week due to holiday and rain.
- Quarry reopened on January 2 and began making deliveries of road base.
- Backfilled and compacted Excavation 2 to 4-inches bgs.
- Continued to place and compact backfill in Excavation 3.
- Pribuss began work activities within the building to reroute the sprinkler system.
- Major storm on Thursday which limited backfill work.

WEEK ENDING JANUARY 11, 2008

JANUARY 7, 2008

- ERRG personnel visit site at various times throughout the weekend to monitor the storm effects and pump water out of the excavation.
- Backfill attempted on Monday but backfill material exceeded the optimal moisture content for proper compaction.
- Repaired storm drain controls, stock pile covers, fencing, etc. that had been damaged in the storm.
- Pribuss completed the sprinkler system reroute.

JANUARY 8, 2008

- Shoring box removed from shoring cell #2 (2nd from the west side of Excavation 3)
- Begin to remove remaining portions of the mezzanine.

JANUARY 9, 2008

- Demolition of mezzanine completed.
- Loaded and removed two shoring boxes from site (removed from Excavation 3 earlier in the week).

JANUARY 10 and 11, 2008

- Erected shoring towers inside the building.
- MACTEC collected a sample of the drain rock and road base material from the Wilson Quarry in Aromas for a compaction curve and laboratory tests for possible use as backfill material in Excavation 1. Sample submitted to Curtis and Tompkins to be analyzed for TPHg, TPHfo, TPHd, and BTEX using EPA Test Method 8015 and Title 22 metals using EPA Test Method 6010C plus 7471A for mercury, and pesticides and herbicides by EPA Methods 8081A, 8141A, and 8151A.
- General housekeeping performed.

Issues and/or Scope Deviations and Resolution

- Work delayed because of wet weather conditions and backfill material exceeding optimal moisture content for compaction
- Addition backfill materials unavailable until quarry re-opened on January 2, 2008. Backfill work was put on hold until more backfill materials delivered to site.

Project Milestones Achieved

- Backfill and compaction complete for westernmost section of Excavation Area 3 outside of the shoring, and the first 20-feet of shoring on the west side.
- Backfill and compaction complete for Excavation 2.
- Sprinkler reroute complete.

Work planned:

- Continuation of backfill and compaction activities in Excavation 3.
- Continue shoring building and replacing support columns.

Excavation a 3 – Looking west from eastern end of excavation. Groundwater at approximately 5 feet bgs.

Excavation 3 – Sediment sampled inside 12-inch diameter clay pipe on the westernmost end of the excavation area.

Excavation 3 – From east end looking west. Showing filter fabric and placement of drain rock at the bottom of the excavation.

Excavation a 3 – From east end looking west. Showing filter fabric and final placement of drain rock (approximate depth 5 feet bgs).

Excavation 3 – Former area of the westernmost shoring section, area now backfilled and shoring removed.

Excavation 3 – From the holding tank looking northeast. Showing Excavation area 3 as of December 26, 2007.

Date: 12/19/07

Notes by: Scott Graham

Materials onsite

Field Notes: Onsite 730 - Discuss job

Lay filter fabric on North side, bridge water with drain rock + top with AB, remove shoring as we go

ERRG just received approval for the sprinkler system reroute - scheduled for next week

totalizer for discharge at 5,215,900 at 800 - They have been pumping water from Ex 3 for the last 2 days - It is down approx 6"

800 - hook up trash pump for faster water removal (was using small sump pump)

815 - S+S Trucking Unloads a load of Drainrock

825 - 1st Load of Base Rock Delivered

830 - Begin Digging out West end of Ex 3 to get a sample from inside the clay pipe traveling west into the parking lot

820 Attend site safety meeting

835 - 2nd load of Base rock - Loads of Base rock delivered today while I am present 730-130p +2 more as leaving

845 - collect sample from west end of Ex 3 in pipe → 106550-100 [5.5] 13S 35W 5.5' deep

Call Mary Jo to get sample Number

935 - Use woven filter fabric to cover North side of Ex 3 prior to backfill

1020 - Finish handing filter fabric

11am - Begin Backfilling hole with drain rock - East to west to above water 5.5-6ft bgs

1230 - UltraEx (Courier) onsite to pick up sample

ERRG will clean out stuff from west side, re-cap the pipe with concrete (2 bags mixed + poured) + begin laying base rock from west to the east plan to finish overex area + 1st shoring section to just below grade 1st Then move to next section + remove shoring as they go

1250 - totalizer: 5219,900 Depart site

Materials onsite

Field Notes: Onsite 1000

No work currently taking place - no workers onsite
totalizer reading: 5,246,844 - not currently discharging
Westernmost 20' of Ex 3 backfilled to approx 1.5' bgs & shoring removed - 2nd segment at approx 4' bgs & 3rd & 4th at approx 5' bgs
No addl' work done to Ex Area 2 since I was last here
Holding tank is empty
Take pictures of site
Caltrans workers onsite to mark USA for boring locations for geophysics work related to the Doyle Drive work
1030 Hertz onsite to exchange the remote controlled compactor - remote didn't work on the old one
Called James to discuss work - They worked a ½ day on Monday because the AB was too wet & would not compact
They spread it out next to the ex TB let it dry out & retrieved this morning but only the top 8" was dry enough to work with
They need to get more AB shipped but the quarry is shut down until next Wednesday - no more work until then
The sprinkler reroute is scheduled to start tomorrow
Depart 1040

PROGRESS REPORT
BUILDING 1065 AREA CORRECTIVE ACTION PLAN IMPLEMENTATION
PRESIDIO OF SAN FRANCISCO, CALIFORNIA
Excavation Activities

Weeks Ending: January 18 and 25, and February 1, 2008

Summary of Work Performed

WEEK ENDING JANUARY 18, 2008

- Completed placement and compaction of backfill to the ground surface in Excavations 2 and 3. Backfill compaction tests met project specifications.
- Completed installation of shoring for the northernmost row of four building support columns.

WEEK ENDING JANUARY 25, 2008

- Placed asphalt over backfilled Excavation 2
- Excavated soil to 10 feet bgs beneath the northernmost row of building support columns
- Collected soil samples at 8.5 feet bgs from the two centermost column excavations and submitted the samples to Curtis and Tompkins for analysis for TPHd, TPHfo, TPHg, and BTEX, arsenic, and lead. Arsenic and lead were analyzed on standard TAT. TPHfo, TPHg, and BTEX were analyzed on 48 hour TAT.
- Laboratory analysis of the two soil samples indicated that concentrations of TPHfo, TPHg, and BTEX in soil at 8.5 feet bgs in the center of the northernmost row are below site cleanup levels

WEEK ENDING FEBRUARY 1, 2008

- Placed sono tubes and poured concrete supports for the northernmost row of 4 columns
- Tested concrete (min compressive strength) and obtained approval to remove the shoring.

Issues and/or Scope Deviations and Resolution

- Odor was noted in soil excavated for the northernmost column supports and samples were collected beneath two columns at depths of 8.5 feet bgs and analyzed for a limited suite of COCs including TPHd, TPHg, TPHfo, BTEX, arsenic, and lead. The samples were analyzed to assess the potential maximum depth of contamination at the northern limits of Area 1 and assess the depth at which the column supports should be installed so that there will be no limitations as to removal of contaminated soil at depth. The column supports were installed to 10 feet bgs in Bay Mud. Based on the analytical results for samples at 8.5 ft bgs, the supports are below the anticipated maximum depth of excavation.

Project Milestones Achieved

- Backfill and compaction complete for Excavations 2 and 3.

- Asphalt paving completed for Excavation 2.
- Northernmost row of 4 columns removed and supports installed in Bay Mud.

Work planned:

- Continue shoring and replacing support columns.

PROGRESS REPORT
BUILDING 1065 AREA CORRECTIVE ACTION PLAN IMPLEMENTATION
PRESIDIO OF SAN FRANCISCO, CALIFORNIA
Excavation Activities

Weeks ending: February 8, 15, 22, and 29, 2008

Summary of Work Performed:

WEEK ENDING FEBRUARY 8, 2008

- Completed shoring of the building roof for the second row (from the north) of four building support columns
- Cut and removed building support columns.

WEEK ENDING FEBRUARY 15, 2008

- Excavated under second row of building support columns to approx. 9.75 ft bgs
- Installed sono tubes and poured concrete under the support columns
- Tested concrete for pour for first row of columns (three days required to set concrete).

WEEK ENDING FEBRUARY 22, 2008

- Removed shoring from second row of support columns and set up shoring for the third row.
- Excavated under support columns in third row to approx 9.75 ft bgs.
- Installed sono tubes and poured concrete (Friday).
- Concrete pour for second row of columns tested at 4,000 psi.

WEEK ENDING FEBRUARY 29, 2008

- Concrete pour for third row of building support columns tested at 4,000 psi.
- Removed shoring from third row of support columns and set up shoring for the last row.
- Excavated under columns of fourth (southernmost) row to approx 9.75 ft bgs.
- Installed sono tubes and poured concrete (Friday).
- Site meeting to discuss progress of work and plans for excavation.

Analytical Results:

- Attached are database reports presenting analytical results from 1) the sediment sample collected from the terra cotta piping at the western end of Excavation 3 on December 19, 2007 and 2) samples collected from potential backfill source material from Granite Quarry in Aromas, California on January 11, 2008.
- Analytical results from the sediment sample showed that the sediment in the piping contained TPH diesel (d), TPH fuel oil (fo), and TPH gasoline (g), lead, cadmium, polynuclear aromatic hydrocarbons (PAHs), and chloromethane at concentrations above site cleanup levels.

- Analytical results from the Aromas Quarry sample showed that pesticides and herbicides were not detected and metals, TPHd, TPHfo, and xylenes concentrations were below site cleanup levels. It is noted that TPHd was detected at concentrations just above the reporting limit and TPHfo and xylenes were reported as j-flagged values (reported at estimated concentrations below reporting limits). Analytical results show that the samples are suitable for backfill material below 18 inches bgs.

Issues and or Scope Deviations and Resolution:

Excavation Depth and Approach to Excavation of Area 1

- Analytical results for soil samples collected at 8.5 ft bgs from below concrete footings in the northernmost row of columns indicates that contamination in this area does not extend to Bay Mud (encountered in the northern column rows at approximately 9 feet bgs). Visibly impacted soil was observed by ERRG between 4 and 6 ft bgs when digging the footings for the column supports. Based on analytical results, it appears that excavation to Bay Mud may not be required in the northern portion of the excavation to remove contaminated soil.
- The plan for excavation of Area 1 (inside of Building 1063) is to excavate contaminated soil to depths of approximately 7 to 8 feet bgs beginning at the northern wall of Building 1063.
- Soil from the bottom of the excavation will be screened to verify that contamination has been removed before excavating soil in the southern part of Area 1 and prior to collecting bottom confirmation soil samples.

Clay Pipe in Excavation Area 1 (Inside of Building 1063)

- During excavation of one of the footings in the northernmost row of roof support columns, a 4- to 6-inch diameter clay pipe was encountered at approximately 7 ft bgs. Petroleum odor (aged gasoline) was noted in the soil; however it was not determined whether it was related to the piping (which was excavated). The pipe is believed to be an abandoned storm sewer line because it conveyed water into the excavation during recent rainfall events, although the line is not shown on Trust utility maps.
- During excavation of Area 1, the location and condition of the clay pipe will be documented (including where it exits the excavation area). The pipe will be plugged where it exits the excavation and possibly replaced during backfilling.

Contamination in sediment within terra cotta piping at western end of Excavation 3

- Analytical results for sediment samples show that sediment in the piping contains contaminants above site cleanup levels. Breaks or leaks in the lines could result in localized impacts to soil. The line appears to run west into the parking lot which serves as a soil stockpile staging area.
- The Trust plans to remove the piping and excavate soil around the piping and collect soil confirmation samples from below the piping. The piping will be removed following completion of Excavation 1, and sampling, profiling, and offsite disposal of stockpiled soil.

Project Milestones Achieved:

- Completed removal and replacement of 4 rows of columns within Excavation Area 1.

Work Planned:

First week of March

- Test concrete of the fourth row and remove shoring (Monday).
- Break up and remove remaining concrete cap of Excavation 1 (Monday).
- Begin excavating Area 1 (inside of Building 1063) on Tuesday, March 4, 2008. Excavate from north to south to remove visibly impacted soil and soil with elevated PID readings (anticipated depth of 7 to 8 ft bgs).

Discussion Points for Next Stakeholder Meeting (March 18, 2008)

- Status of Excavation 1 (further details concerning clay pipe, analytical data for additional confirmation samples, and observations during excavation)
- Plans for removal of terra cotta piping from parking area.

Attachments

- Concrete Compression Tests
- Sediment Sample Results, Terra Cotta Pipe - Excavation 3
- Analytical Results for Aromas Quarry Sample.

PROGRESS REPORT
BUILDING 1065 AREA CORRECTIVE ACTION PLAN IMPLEMENTATION
PRESIDIO OF SAN FRANCISCO, CALIFORNIA
Excavation Activities

Week Ending: March 7, 2008

Summary of Work Performed:

March 3 & 4, 2008

- Concrete was removed north of the first (northernmost) row of columns in Building 1063 and soil was excavated to a depth of 6 feet bgs in that area.
- ERRG collected composite soil samples from the soil stockpiles from Excavations 2 and 3.

March 5, 2008

- Potholes were dug near Columns 2 and 3 and soil to assess the depth of impacted soil using PID measurements, observations of soil staining, and/or petroleum odor.
- Soil was excavated from Grids 60E to 70E to a depth of 7 feet bgs and to a depth of 7.5 feet bgs in the area west of Grid 60E (shown on attached field maps).
- Soil was excavated from the north sidewall at an approximate one to one slope except for the sidewall section between 34E and 40E where PID readings at 6 feet bgs were 400 to 450 ppm. At that section of sidewall, soil was further excavated at a 2 to 1 slope. After removal of additional soil from the sidewall, soil in that section of sidewall was re-screened and showed a PID reading of 0 ppm.
- A 4-6" diameter clay pipe (containing mud and water) was removed from the northern portion of the excavation and traced to where it entered the north sidewall. The top of the pipe was located at approximately 7 ft bgs.

March 6, 2008

- Excavation bottom confirmation soil sample 1065EX303(7.0) was collected from the 7-foot deep section of Excavation 1 and 1065EX304(7.5) was collected under the former location of the clay pipe in the excavation area west of Grid 60E.
- Sidewall soil samples 1065EX305(6.0) and 1065EX306(6.0) were collected from 6 foot bgs where the highest PID measurements were recorded. 1065EX306(6.0) was collected from the section of sidewall (2:1 slope) where there were previously elevated PID readings.
- A duplicate soil sample and an equipment blank sample were collected.

March 7, 2008

- Concrete was removed from and soil excavated from the west side of the excavation between 40N and 50 N and as far east as Grid 62E.
- Excavation depths ranged from 7 feet to 7.75 feet bgs. Soil was excavated from areas where there were elevated PID measurements, observations of soil staining, and/or petroleum odor.

Project Milestones Achieved

- Soil was excavated between the northernmost row of columns and northern sidewall and bottom and sidewall samples were collected from the northern portion of the excavation.
- ERRG collected stockpile samples for profiling of soils removed from Excavations 2 and 3.

Work Planned:

- Excavate area to the south and collect confirmation soil samples.

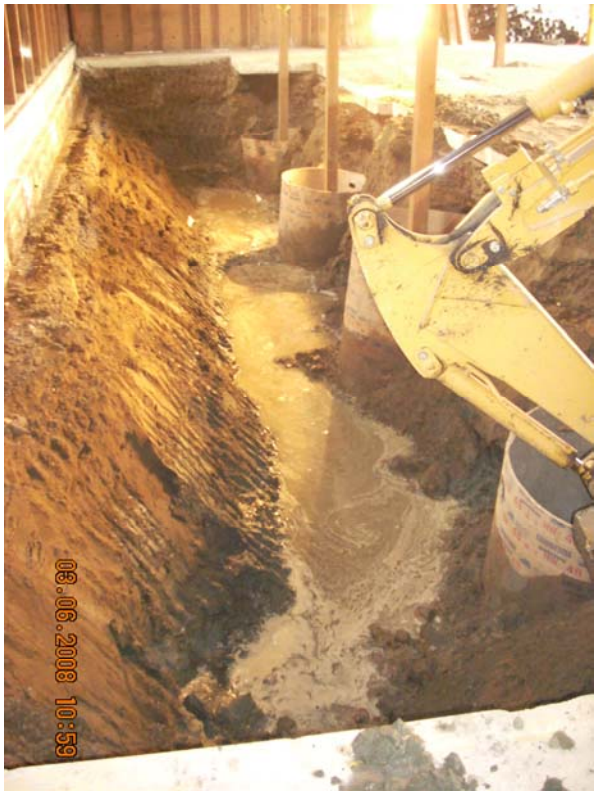
Discussion Points for Next Stakeholder Meeting (March 18, 2008):

- Proposed sampling grid for bottom and sidewall confirmation samples.

Attachments:

- Daily Field Logs
- Photographs

Excavation 1: Looking West from 55N/80E. March 5, 2008.



Excavation 1: Looking East from 58N/26E. March 6, 2008.

Excavation 1: View looking west from the remaining mezzanine located to the east (40N/86E). End of day March 7, 2008.

Daily Field Log Sheet 1 of 2

Project Name: Building 1065 Area CAP Implementation **Job #** 408407S115 **Task:** 02.4

Date: 3/5/08

Project Location: Excavation 1

Notes by: Scott Graham

Onsite Personnel: Dorick, Alberto, Enrique

Site Visitors: Ram, Ryan, Tyson, Goose

Weather: Clear + Sunny

Site Conditions & Safety Considerations: Slips/Trips/falls, Moving equipment, open holes

Monitoring Equipment Used: MicroTip HL-2000 **Calibration** ok **Date** 3/5/08

calibrate using 100ppm iso butylene

Number of samples collected: Soil: Ø Water: Ø	COCs Attached	Yes	No
	Sample Location Map Attached	Yes	No

Time Collected	Sample ID	Depth	Notes

Contractor Equipment Onsite: Mini-excavator, 5yd dump, bobcat, Lights, Holding tank

Estimated volume excavated 51×10×6'	Site Plan Attached	Yes	(No)
Truck Loads of Soil Off-Hauled Ø	Manifests/Bills of Lading Attached	Yes	No
Imported Backfill Truckloads or Cubic Yards Ø	Bills of Lading Attached	Yes	No

Daily Field Logs Sheet 2 of 2

Project Name: Building 1065 Area CAP Implementation **Job #** 408407511.5 **Task:** 02.4

Date: 3/5/08

Notes by: Scott Graham

Materials onsite

Field Notes: Onsite 930

Discuss Job with Derek (ex operator)
They have a 10' section dug to 6ft - Northmost row
Pothole ex to determine depth we need to dig to
7' deep 5' north of column 3 - PID = 0.0
7' deep 5' north of column 2 = 268ppm at 7.5 deep 20ppm
Discuss excavation depth - decide to dig to 7' deep on east side (water at ≈ 6') + 7.5-8 ft on West
Call Mary Jo to discuss - she suggests I call Ryan to discuss the clay pipe encountered while digging out column 3 + determine if it is an active storm drain
1030 - Left a message with Ryan
1050 - Ram, Ryan, Tyson + Goose onsite to check out site - Ryan wants us to reconnect pipe when done - Ram + Ryan depart 1110
Calibrate PID, Lay out sample grid
Excavation Area is 50' EW to 60' NS - Draw up map for sample Locations
Strong Odor at 6' in NW end of ex-fill materials (Lots of bottles + bricks)
North Sidewall from 29-49E has PID of 400-450 ppm at 6' bgs at 1:1 slope discuss + decide to try a little steeper 2:1 as soil types are more cohesive + see if we can remove
PID at background at 7.5' - sediments are ~~mostly clean fn grained sand~~ ~~sandy clay~~ mostly brown to 5, then Dk grey sandy clay
158 PID at 6' near colum 3
Top of Clay pipe at around 6' near column ≈ 4 to 6" diam appears to go NW to SE through column 3
Depart 1500

Materials onsite

Field Notes: Onsite 555

Alberto Tenorio Onsite at 635, Derek onsite 675,

Attend H+S meeting

650 - begin excavating West to east to depth ~~near the clay pipe~~, currently at ≈ 6', going to 7'
moist at 6' but no standing water, water at 6'3" bgs

Calibrate PID

Soils consist of 6" concrete pad, 2" clean fine grained sand, 2' fill brown - 30% gravel 5-10% fine sand, 60% silt, ceramic + brick fragments, 2' fine gr brown clean sand angular up to 1" with ~~clay~~ 30% clay, 30% silt, 30% very fine gr sand, Trace of gravel up to 1"
Dark grey - moist to wet, Soft to not cohesive.

Footing ~~on North wall goes 18" below bottom of pad then sticks out, 6" + goes another 6"~~

Sketch ~~footing~~ foundation dimensions attached

Collect Bottom sample 1065EX303[7.0] at 8am 50N 67E + MS/MSD + DUP
PID: 12.5

Orange brown hard silty-clay with 5-10% very fine grained sand (70% clay, 20% silt) at 7' where sample was collected

Collect Equipment Blank 1065EX303RB304 at 845

Collect Bottom sample 1065EX304[7.5] at 905 same at 54N 46E 0.0 on PID
- collect under the clay pipe where it goes into the North sidewall 1:1 Slope
Soil is Dark grey, wet, 30% clay, 30% very fine gr sand, 40% silt

Collect Sidewall sample 1065EX305[6.0] at 945 55N 61E 0.2 ppm on PID
in Dark soil - Dk grey clayey sand, wet 30% clay, 10-20% silt, 50-60% v fine gr sand

Collect Sidewall sample 1065EX306[6.0] at 1020 57N 37E 0.0 ppm on PID
in Dk grey, wet, Silty sand, 10-20% clay, 50-60% v fine gr sand, 30% silt

1045 Start removing concrete and start excavating S from 50N

CT Courier onsite 1220 to pick up samples

Lunch 1230 -|

50N 46E - 7.5
37E 57N - 6 1020

Daily Field Logs Sheet 3 of 5

Project Name: Building 1065 Area CAP Implementation **Job #** 408407511S **Task:** 02.4

Date: 3/6/08

Notes by: Scott Graham

Materials onsite

Field Notes: Remove concrete & excavate West to East in section from 40-50N
PID reading at 7.5' deep 44N34E ≈ 16 to 50 ppm
1415 finish ex for day so dump can have some maintenance work done
Everyone Departs 1430

Materials onsite

Field Notes: Onsite 625
Enrique & Alberto Onsite, Derek arrives 630
Totalizer at 5,244,744 & is dry (no pumping for awhile)
Alberto & Enrique depart to p/u replacement dump truck from Hertz (other is in the shop)
Calibrate PID, Water in excavation at approx 7' bgs
New Dump Truck (3 yrd) onsite at 730, Attend H+S meeting
Begin excavating 745 just south of column 1 (Between 1+5)
Walk around ~~to~~ Bldg 1040 to familiarize myself with it
9 am - remove concrete between columns 1+2 & 5 & 6 & begin excavating
915 - Ryan onsite, Departs 930
Hit hard section at 7' in section, PID at 17ppm, Excavate Section to 7'3" at 0.0ppm
1030 - begin removing next section of concrete between columns 2 & 6
1130 - remove concrete between 50E & ~~60~~ 59E & 38N & 48N & begin excavating
17ppm at 7' between Columns 2 & 6
PID East SW @ 6' bgs 42N 60E at 83ppm → keep digging east
1345 - remove concrete between 38N & 48N @ to 62E & begin excavating
317ppm at 15ft bgs at 41N 62E keep going east
1415 remove concrete from ~~42N~~ 50N-46N at east end of ex
1430 - Begin covering stockpiles & clean up
1440 - Depart Site

BUILDING 1065 AREA CORRECTIVE ACTION PLAN IMPLEMENTATION
PRESIDIO OF SAN FRANCISCO, CALIFORNIA
Excavation Activities

Week Ending: March 14, 2008

Summary of Work Performed:

March 10, 2008
- Excavated soil between Grids 60E and 70E and 38N and 50N to 7.5 feet bgs.
- Removed concrete from area between 74E and 80E. Soil was not excavated from this area as there were no odors or PID readings.
- Removed concrete between Columns 7 and 8 and 6 and 7 and excavated soil to 7 feet bgs.
- Water flowing from terra cotta pipe into excavation.

March 11, 2008
- Excavated soil between Columns 5 and 6 to 7.5 feet bgs based on PID readings.
- Removed concrete between west edge of excavation area and Columns 5 and 9. Excavated area to 8 feet bgs based on PID readings.
- Water encountered in Excavation 1 at 7.5 bgs.

March 12, 2008
- Excavated soil between Columns 5 and 6 to 8.5 feet bgs based on PID readings.
- Soil at 8.5 feet has a high clay/silt content appears to be the top of the Bay Mud.
- Removed concrete between Columns 6 and 7, 10 and 11, 7 and 11, and 7 and 8 and excavated soil to 8 feet bgs.
- ERRG cleaned out the holding tank with a high pressure washer and discharged the rinsate to the bermed area of the soil stockpile.

March 13, 2008
- Removed concrete between Columns 7 and 8, 11 and 12, 8 and 12 and excavated soil to 6.5 to 7 feet bgs on the basis of PID readings.
- Removed concrete southeast of Column 13 and the south wall.
- Two corroded metal pipes were encountered at 1 foot bgs. The pipes comprised one 3-inch diameter pipe and a 2- inch diameter pipe with a ¾-inch pipe inside. Soil in the area was excavated to 2 feet.

March 14, 2008

- Completed excavation of soil between columns 10 and 11 and 9 and 10 and the west wall of Excavation 1.
- Removed concrete in the southern part of Excavation 1 area for a slot trench. Trench was located 4 to 6 ft north of and parallel to the south wall of Building 1063.
- The slot trench was excavated to 6.5 feet bgs, backfilled with 1 foot of gravel, and AB to the ground surface.
- The AB was compacted with bucket of excavator. No compaction testing was performed.

Project Milestones Achieved

- Soil was excavated in central portion of Excavation Area 1.

Work Planned:

- Excavate area to the south and collect confirmation soil samples.

Discussion Points for Next Stakeholder Meeting (March 18, 2008):

- Proposed sampling grid for bottom and sidewall confirmation samples.

Materials onsite

Field Notes: Onsite 910

Calibrate PID, Discuss Job with Derek & James

Area between 60-72E & 38-50N excavated to 7' - need to uncover the clay pipe just below that level - look like they scraped it once as I see a small piece in the ex bottom

58ppm at 7' - go 6" deeper under pipe; 0.2 ppm at 7.5' above right next to pipe

0.0 ppm at 6-6.5ft bgs at 74E 42N = no need to go further east

0.3ppm at 7' bgs rest of section between columns 3, 4, 7, & 8

Will take sidewall sample here from under the pipe, 3.5ppm at 7ft just under the pipe where it goes into east sidewall at 42N 74E

Remove concrete from area east of 74E (to 80E) but no need to excavate (based on PID, Look, odor)

STLC on stockpile says Cal Haz for lead, Tyson has ordered TCLP on rush

Discuss soil left in place vs potential high lead content with Mary Jo & Ryan - Ryan thought that the high lead might be from lead based paint washing off the outside walls, so we shouldn't have that problem inside, lead cleanup level for soil is 400ppm - so we can leave soils if PID is low & no indication of contamination

1045 remove concrete between columns 7 & 8 & begin excavating area

Standing Water is flowing out the end of the clay pipe into the Ex

1245 remove concrete between columns 6 & 7 & begin excavating area

Ryan on site 1315-1345, discuss excavation & sampling plan, Ryan would like us to count Ex 3 & 1 as one excavation in regard to the amount of bottom & sw samples that we collect, so that we only collect 4 bottom samples in Ex1 as opposed to 6 & not take any sw samples until after next tuesday's meeting

Materials onsite

Field Notes: Onsite 915

Discuss revised sampling plan with James

PID range from 79 at 7.5 ft to 100-250 ppm at 8' between columns 6 & 6 + 9+10 - Dig to 8.5 ft - 6.0 on PID

Battery on PID Low using ERRGs PID - 580B OVM which James calibrated this morning using 100 ppm isobutylene

Albert to cleaning out holding tank with high pressure washer & discharging sludge into bermed area of stockpile

Sediments at 8.5 are more clayey then those above may be transistioning to Bay Mud 20% very fine sand, 30% clay, 50% silt, DK Gray, Organic smell

Discuss excavating approach with Derek & James, Looking at historic lead concentrations at 4 & 3.5 ft (SB141 & 143) & difficulty removing soils if left in Place - we may want to remove all soils in an area rather than leave small chunks on east side

1100 remove concrete from between columns 6, 7, 10, & 11 & begin excavating 34N.52E - 200 ppm at 7'; 70-115 ppm at 7.5'; 2.0 ppm at 8' - dig area to 8

Lunch 12-1230

1340 remove concrete from between columns 7 & 11 & begin excavating Water is at 7'10" bgs near column 10 but is differing heights at different locations as some of it is from inside the sonotubes & was released while digging

Derek will continue to 8' between columns 7 & 8 & will remove concrete further east (between columns 7, 8, 11 & 12) but probably won't have time to get to depth tonight

Open Bldg + get Lights going, attend H+S meeting

Calibrate PID

7am continue excavation area between columns 7+11 + clean up stuff that has fallen into excavation

710 - remove concrete between columns 7, 8, 11+12 + begin excavating

7.0ppm at ~~6.5~~ bgs @35N70E, 3.1 ppm at ~~6.5~~ bgs @30N64E - dig section to ~~6.5~~ to 7'

930 remove concrete between colums 8+12 + begin excavating

3.8ppm in SW at 6' bgs - 7' bgs = 30N 72E - No need to go further east

900 - remove concrete SE of column 16 between it + South wall

- begin excavating section 74E-80E + 0-10N

1' bgs there are two pipe travelling near the foundation - one 3" diam metal pipe parallel to foundation + 1 2" metal pipe with a ¾" pipe inside it. at an angle (See pictures), Both are old + corroded, no obvious contamination

Dig section to 2' bgs

1015 - Remove concrete between columns 11+12 + begin excavating

Derek not feeling well - leaves at 1030

3.8 at 6.5 feet between columns 11+12 - go to that depth

1040 - Remove concrete from between columns 10+11

Depart site 1145

Field Notes: On site 9.25

ERRG completed Excavations between columns 10&11, 9&10, & West Sidewall & 9 to Final depth & are beginning slot trench along South wall

Calibrate PID, Review H&S sheet

30ppm at 5N 7E at 6' - dig trench to 6.5' - 5.2 ppm

Trench is bucket width (3.2') & is 4-6 ft N parallell to S wall

Take picture of site - picture times are off by about 1hr - change batteries & reset time (Pic #)

Fill slot trench with 1' gravel & roadbase to surface - compacted with excavator bucket (no testing) - may be removed later - bring whole section to grade with base

1020 remove concrete between column 16 & South wall & extend trench

Ryan on site 1030-1045, Discuss excavation & sampling plan, Ryan would like SW samples of the deeper soils most likely containing petroleum as this is a petroleum case & lead is most likely from the fill, not petroleum

87ppm at 5.5 ft (+odor) at 5N 7E, dig deeper, 7.2 ppm at 6.5 ft bgs

backfill with all roadbase (no rock) to ~~fill~~ surface

1130 - Remove concrete between columns 15&16 & south wall

Tyson on site 1125 - 1215, Discuss foundation shoring

Lunch 1220 - 1240

3.7ppm at 6.5 ft bgs at 5N 5E - Dig trench to 6.5 - Fill with roadbase

Plan to end there & start on West side - digging towards the center from the west side

Depart 1330

March 14, 2008. View looking southwest at southeast corner of Excavation 1 from mezzanine.

PROGRESS REPORT
BUILDING 1065 AREA CORRECTIVE ACTION PLAN IMPLEMENTATION
PRESIDIO OF SAN FRANCISCO, CALIFORNIA
Excavation Activities

Week Ending: March 21, 2008

Summary of Work Performed:

March 17, 2008

- Excavated slot trench from 60E to 80E to 6.5 feet bgs. Filled slot trench with Class II AB and compacted AB with excavator bucket. Width of slot trench in this section is approximately 3 feet (3N to 6N).
- Excavated slot trench from 29E to 48E to 8.5 feet bgs. Filled with Class II AB and compacted AB with excavator bucket. Width of slot trench in this section is approximately 7 feet (3 to 10N).
- Excavated slot trench from 48E to 60E to 8.0 feet deep. Filled with Class II AB and compacted AB with excavator bucket. Width of slot trench in this section is approximately 7 feet (3 to 10N).

March 18, 2008

- Excavated soil between Columns 9 and 13 and west sidewall to 8 feet bgs based on PID readings and proximity to sidewall edge (section near Column 13 excavated at a 4:1 slope – 8 feet deep and 2 feet wide).
- Removed concrete between Columns 9, 10, 13, and 14 and excavated area to 8.5 feet bgs based on PID readings.

March 19, 2008

- Excavated soil between Columns 11, 12, 15 and 16 to 6.0 feet bgs based on PID readings.
- Collected samples 1065EX308 through 1065EX310 from the west sidewall at 50N, 30N, and 10N.
- Collected bottom samples 1065EX311 and 1065EX312 from deepest and shallowest locations in the excavation bottom.
- Collected east sidewall samples 1065EX307, 1065EX313, and 1065EX314 from near 50N, as close to the south sidewall as possible (from pothole excavated for sampling as per NPS's request), and from the eastern portion left in place based on PID readings (near 30N).
- Removed concrete between Columns 15 and 16 and excavated to 6.5 feet bgs.

March 20, 2008

- Removed concrete between Columns 10, 11, 14, and 15 and excavated soil to 8.5 feet bgs on the basis of PID readings.
- 20,000-gallon holding tank removed from site.

March 21, 2008

- Clean up excavation and soil stockpile area
- Break up concrete for disposal/recycling.

Project Milestones Achieved

- Completed Excavation 1.
- Collected initial confirmation soil samples from Excavation 1.

Work Planned:

- Review excavation sample results when reported and assess whether additional excavation would be required.

Materials onsite

Field Notes: Onsite 645

Calibrate PID, Discuss work schedule - may be down for about a month after I sample on Wednesday for backfilling, before digging under the foundation

Attend H+S meeting

7am - begin slot trench on west side of ex along South wall

83ppm at 8ft @ 34E 5N, go to 8.5 - 0.3 ppm

Widen slot trench on west side (to the north) due to depth of contamination

Sediments are a silty sand (Dk gray) at 9'

Remove concrete from between columns 13 + 14 south wall

Call Lab + schedule sample pickup between noon + 1pm on Wednesday

Fill up western section of slot trench with road base + compact with backhoe bucket

910 - Begin excavating slot trench from 36-48E, 4.2 ppm at 8.5

Soils consist of 6" concrete cap, 2" fine clean sand, 1' fill - sandy silt with some gravel + brick fragments, 8" to 1' of lighter fill - 30% clay, 20% very fine gr sand, 50% silt, 2' clean brown sand, + then dk gray fine grained sand with increasing clay with depth

1035 - Fill Section with roadbase 8.5' to surface, 6" gravel on bottom

1135 - Remove concrete from area between columns 14 + 15 + the South wall

Depart 1150

Slot Trench – 40E to 50E. Looking towards the east. Trench depth is 8.5 feet.

Area between columns 9 and 13 from the southwest. Depth of excavation is 8.5 feet.

Location of Sample 1065EX313 from the west. Southeast corner of Excavation 1. Pothole is 4.5 feet deep.

Sample Locations 1065EX312 and 1065EX314 (white flags) from the southwest. Columns 8 and 12 shown.

Sample Locations 1065EX308, 1065EX306, and 1065EX304 shown (white flags left to right) from the southeast.

Sample Location 1065EX310 (white flag) from the northeast.

PROGRESS REPORT
BUILDING 1065 AREA CORRECTIVE ACTION PLAN IMPLEMENTATION
PRESIDIO OF SAN FRANCISCO, CALIFORNIA
Excavation Activities

Weeks Ending: March 28 and April 4, 2008

Summary of Work Performed:

WEEK ENDING MARCH 28, 2008

March 24, 2008

- Removed remaining concrete from excavation area.
- Continued breaking up concrete for disposal/recycling.

March 25, 2008

- Completed breaking up concrete.
- Began hauling off of concrete for disposal/recycling.

March 26, 2008

- Removed soil left in place on eastern sidewall. Bottom of slope at approximately 75E.
- Collected sidewall sample 1065EX315 at 5 foot bgs from over-excavated eastern sidewall.

March 27, 2008

- Drain rock shipped to the site.
- Began placement of drain rock in excavation.

March 28, 2008

- Surveyed excavation limits and soil sample locations.

WEEK ENDING APRIL 4, 2008

- ERRG installed drain rock in Excavation 1 from bottom to approximately 4.5 feet bgs.
- Began installing and compacting road base/AB in 6-inch lifts from approximately 4.5 feet bgs to 1.5 feet bgs.
- Off-hauled and disposed of concrete from Excavation 1.

Project Milestones Achieved

- Completed Excavation 1 and began backfill activities.
- Collected confirmation soil sample from eastern sidewall.

Work Planned:

- Complete backfilling of Excavation 1.
- Replace footings and building support columns to original grade.

PROGRESS REPORT
BUILDING 1065 AREA CORRECTIVE ACTION PLAN IMPLEMENTATION
PRESIDIO OF SAN FRANCISCO, CALIFORNIA
Excavation and Soil Vapor Sampling Activities

Weeks Ending: April 11, 18, 25 and May 2, 9, 16, and 23, 2008

Summary of Work Performed:

Weeks ending April 11, 18, 25, and May 2:

- Completed backfill and compaction of Excavation 1
- Poured concrete footings for the building foundations, shored up temporary sections, replaced temporary support columns with the final supports, and removed shoring for the first three rows (12 columns).
- Loaded, hauled, and disposed of 78 loads of non-RCRA Class 1 hazardous waste to the Kettleman Hills Facility.
- On April 18 and 19, 2008, EKIG collected soil vapor samples from the vicinity of Building 1040 in accordance with the Building 1040 Indoor Air and Cap Assessment Work Plan.

Week ending May 9, 2008:

- Excavated and removed the 12-inch ID clay pipe exiting the western end of Excavation 3. Trench was approximately 2 feet wide by 8 feet deep by 60 feet long.
- Collected confirmation soil samples (bottom samples) 1065EX368[8.0], 1065EX369[8.0], and 1065EX370[8.0] from the trench.

Week ending May 16, 2008:

- Continued excavation of 12-inch ID clay pipe across the parking lot west of Building 1065.
- Encountered and removed an inactive utility vault. The vault was brick with an iron cover at approximately 1 foot bgs. The 12-inch ID pipe exited the vault from the west (bottom of pipe at approx. 8 ft bgs).
- Two additional pipes entered the vault: an approximate 18-inch ID clay pipe entered from the east (bottom of the pipe at approx. 7 ft bgs), and a 10-inch ID clay pipe entered from the southeast (bottom of the pipe at approx. 6.5 feet bgs).
- Vault was filled with gravel and black sludge was observed inside of the pipe. Black material was not observed in pipes on the other side of the vault.
- Excavated an additional 6 feet of pipe on opposite sides of the vault to confirm the absence of black material within the pipes.
- Collected confirmation soil sample 1065EX371[8.0] adjacent to the bottom of the vault.
- Collected sediment samples 1065SD101[6.5] and 1065SD102[7.0] from inside the two pipes entering the manhole. Put samples on hold at laboratory.
- Cleaned up inside Building 1063, and tore down and removed construction fences.

Week ending May 23, 2008:

- ERRG collected and submitted to the laboratory a composite soil stockpile sample of the soils removed from the trench. Waiting on approval to backfill trench.

Work Planned:

- Backfill and compact trench.
- Inspect cap at Building 1040.

Attachments:

- Photographs

Looking northwest from former Building 1065 at start of excavation for removal of the 12 inch ID clay pipe that entered the west side of Excavation 3.

Inside of Building 1063 showing final grade and finished support columns.

Section of 12-inch pipe removed from trench– shows black sediment from inside of pipe.

Looking east at former location of unknown drain manhole just west of the active storm drain (concrete pipe crossing excavation in middle of picture).

Looking southeast at 10-inch ID clay pipe entering unknown vault.

Looking west at 18-inch ID pipe entering unknown vault.

Remains of the former sewer line vault removed from the trench. The manhole cover was located at approximately 1 foot bgs and the vault was filled with gravel.

FINAL PROGRESS REPORT
BUILDING 1065 AREA CORRECTIVE ACTION PLAN IMPLEMENTATION
PRESIDIO OF SAN FRANCISCO, CALIFORNIA
Excavation and Soil Vapor Sampling Activities

Weeks Ending: May 23 through August 8, 2008

Summary of Work Performed:
Week ending May 23 and 30, 2008:

- No work performed onsite.

Weeks ending June 6:

- MACTEC performed the outdoor cap inspection for LUC zones 1, 2, and 3
- EKI performed the indoor cap inspection for Building 1040

Week ending June 13, 2008:

- ERRG backfilled and compacted the sewer line excavation in the parking lot west of Excavation Area 3.
- T&R collected groundwater samples from wells 1065MW101, 1065MW102, and 1065MW103 as part of the Second Quarter 2008 Basewide Groundwater Monitoring Program.

Week ending June 20 and 27, 2008:

- DenBeste Transportation, Inc. transported and disposed of approximately 159 tons (8 truckloads) of soil from the excavation of the storm drain at the Altamont Landfill & Resource Recovery Facility.

Week ending August 1 2008:

- No work performed onsite.

Week ending August 8, 2008:

- PLS surveyed the excavation for the abandoned sewer line and performed the post-construction survey for the Building 1065 Area.

CASE NARRATIVE

Laboratory number:	198380
Client:	Mactec, Inc.
Project:	4084075115
Location:	Bldg 1065 Presidio
Request Date:	10/15/07
Samples Received:	10/15/07

This hardcopy data package contains sample and QC results for two soil samples, requested for the above referenced project on 10/15/07. The samples were received cold and intact. Sample 1065BC402 required crushing prior to analysis due to the large particle size of the material. All volatile analyses were analyzed from available fine material in each sample and were not analyzed from the material delivered after mechanical crushing.

TPH-Purgeables and/or BTXE by GC (EPA 8015B):
High surrogate recoveries were observed for trifluorotoluene (FID) in the MS/MSD for batch 130580; the parent sample was not a project sample. Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 130580; this analyte was not detected in samples at or above the RL. No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):
High recovery was observed for diesel C12-C24 in the MS for batch 130878; the parent sample was not a project sample, and the LCS was within limits. High RPD was also observed for diesel C12-C24 in the MS/MSD for batch 130878. Diesel C12-C24 was detected between the MDL and the RL in the method blank for batch 130710; this analyte was detected in the sample at a level at least 10 times that of the blank. No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):
No analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):
High response was observed for benzo(b)fluoranthene in the CCV analyzed 10/22/07 09:29; this analyte was not detected at or above the RL in the associated sample. Low response was observed for 2-methylnaphthalene in the CCV analyzed 10/19/07 09:29; this analyte met minimum response criteria. High responses were observed for anthracene, benzo(k)fluoranthene, and dibenz(a,h)anthracene. High response was observed for pyrene in the CCV analyzed 10/22/07 09:32; affected data was qualified with "b". Low recoveries were observed for acenaphthene and pyrene in the MSD for batch 130758; the parent sample was not a project sample, and the LCS was within limits. High RPD was also observed for acenaphthene and pyrene in the MS/MSD for batch 130758; these analytes were not detected at or above the RL in the associated sample. Low surrogate recoveries were observed for nitrobenzene-d5, 2-fluorobiphenyl, and terphenyl-d14 in the MSD for batch 130758; the parent sample was not a project sample. Naphthalene was detected between the MDL and the RL in the method blank for batch 130758; this analyte was detected in the

Project:	4084075115
Location:	Bldg 1065 Presidio
Request Date:	10/15/07
Samples Received:	10/15/07

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):
sample at a level at least 10 times that of the blank. No other analytical problems were encountered.

Metals (EPA 6010B, EPA 6020, and EPA 7471A):
Low recoveries were observed for molybdenum, antimony, and zinc in the MS/MSD of 1065BC401 (lab # 198380-002); the BS/BSD were within limits, and the associated RPDs were within limits. Low recoveries were observed for antimony in the MS/MSD for batch 130692; the parent sample was not a project sample, the BS/BSD were within limits, and the associated RPD was within limits. High % differences were observed for barium and cobalt in the serial dilution for batch 130692 and the serial dilution of 1065BC401 (lab # 198380-002). Many analytes were detected between the MDL and the RL in the method blank for batch 130746; these analytes were either not detected in the sample at or above the RL, or detected at a level at least 10 times that of the blank. Chromium and zinc were detected between the MDL and the RL in the method blank for batch 130692; these analytes were detected in the sample at a level at least 10 times that of the blank. No other analytical problems were encountered.

Moisture (ASTM D2216/CLP):
No analytical problems were encountered.

crush (CRUSH):
Metallurgical Laboratories in Concord, CA performed the analysis. Please see the Metallurgical Laboratories case narrative.

To: Seelbach, Ryan; Carlyon, Kristen
Subject: Clarification on analysis of 3/4 inch drain rock and Class II AB from Dutra Quarry
Importance: High

I spoke with Ryan Seelbach today regarding analysis and turnaround times for the samples collected from the Dutra Quarry and submitted to the laboratory yesterday.

Ryan – please e-mail to make any corrections as Kristen will be forwarding my e-mail to the laboratory.

¾ inch drain rock sample – Ryan understands that it may take 1 week for milling, but would like the sample on at least **72 hr TAT** when it comes back as the material is already being imported to the site. **Kristen** – can the laboratory give us a cost for the milling?

Class II AB sample – We only need to analyze the primary, not a duplicate sample of this on 1 week turnaround time. Because the ¾ drain rock and AB are from the same source, they should serve as duplicate samples for at least the metals. So please have the primary sample taken off of hold.

COOLER RECEIPT CHECKLIST

Login#: 198380 Date Received: 10/15 Number of Coolers: 1
Client: MACTEC Project: ~~Baker Beach, 2A~~ KMW 10/15/07 1065 Presidio

A. Preliminary Examination Phase
Date Opened: 10/15 By (print): Ken Wong (sign) [signature]

1. Did cooler come with a shipping slip (airbill, etc.)?..... YES (NO)
   If YES, enter carrier name and airbill number:
2. Were custody seals on outside of cooler?..... YES (NO)
   How many and where? Seal date: Seal name:
3. Were custody seals unbroken and intact at the date and time of arrival?..... YES NO NA
4. Were custody papers dry and intact when received?..... (YES) NO
5. Were custody papers filled out properly (ink, signed, etc.)?..... (YES) NO
6. Did you sign the custody papers in the appropriate place?..... (YES) NO
7. Was project identifiable from custody papers?..... (YES) NO
   If YES, enter project name at the top of this form.
8. Describe type of packing in cooler: bags on ice
9. If required, was sufficient ice used? Samples should be <=6 degrees C. ..... YES NO
   Type of ice: wet Temperature: cold on arrival, no temp blank
10. Were Encore sampling devices present in the cooler?..... (YES) (NO)
    If YES, enter time they were transferred to the freezer 17:15 KMW 10/15/07 Encore devices for separate COC in cooler

B. Login Phase
Date Logged In: 10/15 By (print): KWellbrock (sign)

1. Did all bottles arrive unbroken?..... (YES) NO
2. Were labels in good condition and complete (ID, date, time, signature, etc.)?..... (YES) NO
3. Did bottle labels agree with custody papers?..... (YES) NO
4. Were appropriate containers used for the tests indicated?..... (YES) NO
5. Were correct preservatives added to samples?..... N/A YES NO
6. Was sufficient amount of sample sent for tests indicated?..... (YES) NO
7. Were bubbles absent in VOA samples? If NO, list sample Ids below..... N/A YES NO
8. Was the client contacted concerning this sample delivery?..... YES NO
   If YES, give details below.
   Who was called? By whom? Date:

Baked, solvent-rinsed granular Na2SO4 weighed out for QC samples	EM 47156727	SFL 10/19/07
Samples were dried with CH2Cl2-rinsed powdered Na2SO4	EM 47073734	
1.0 mL of Surrogate solution was added to all samples	573296	
1.0 mL of Matrix Spiking solution was added to all spikes	57330 6	
≥ 75 mL of 1+1 (CH_2Cl_2+Acetone) was added to all — CH_2Cl_2	EM 47110	
Acetone	EM 47156	
Samples were: ☐ sonicated 3 times ☑ placed on shaker table at:	1040	
taken off shaker table at:	1245	
Extracts filtered through baked, rinsed powdered Na_2SO_4	EM 47073734	~~10/19/07~~
Concentrated to volumes as noted above	✓	
Relinquished to TEH Department

AD 10/22/07 [Nitrobenzene-d5]: Reintegrated to avoid printing error and resent improperly resulting in extra quant report at end of original with a different reading for nitrobenzene-d5 ONLY. Both integrations are appropriate and both are w/in QC limits (-2%/-3%D, respectively). Does not affect data - no need to reprocess. [general version]

AD 10/03/07 : Sequence entry error - skipped file vj309.

AD 10/03/07 : ICAL restarted due to grouping start for fluorene.

AD 10/04/07 : Baseline of manual integration for nitrobenzene-d5 does not display in all spectal pages of ICAL files. Integrations of this compound are consistent and appropriate.

CASE NARRATIVE

Laboratory number:	**198818**
Client:	**Mactec, Inc.**
Project:	**4084075115**
Location:	**Bldg 1065 Presidio**
Request Date:	**10/30/07**
Samples Received:	**10/30/07**

This hardcopy data package contains sample and QC results for eight soil samples and two water samples, requested for the above referenced project on 10/30/07. The samples were received on ice and intact.

TPH-Purgeables and/or BTXE by GC (EPA 8015B) Water:
High surrogate recovery was observed for trifluorotoluene (FID) in the MS for batch 131113; the corresponding bromofluorobenzene (FID) surrogate recovery was within limits, and the parent sample was not a project sample. No other analytical problems were encountered.

TPH-Purgeables and/or BTXE by GC (EPA 8015B) Soil:
5035 samples not analyzed within 48 hours were frozen. Low recoveries were observed for gasoline C7-C12 in the MS/MSD of 1065EX352[4.0] (lab # 198818-004); the LCS was within limits, and the associated RPD was within limits. High surrogate recoveries were observed for bromofluorobenzene (FID) and trifluorotoluene (FID) in a number of samples, due to interference from coeluting hydrocarbon peaks. Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 131124. No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B) Water:
Matrix spikes were not reported for this analysis because the parent sample required re-extraction in another batch. No analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B) Soil:
No analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B) Water:
Matrix spikes were not performed for this analysis due to insufficient sample volume. High ICAL percent RSD (relative standard deviation) was observed for vinyl acetate in the calibration analyzed 10/23/07 15:31; this analyte was not detected at or above the RL in the associated samples. High responses were observed for 2,2-dichloropropane and Freon 12 in the ICV analyzed 10/02/07 16:50, the ICV analyzed 10/02/07 17:22, and the ICV analyzed 10/23/07 20:35; these analytes were not detected at or above the RL in the associated samples. Low responses were observed for bromomethane and carbon disulfide in the CCV analyzed 10/31/07 14:04; these analytes met minimum response criteria. Low responses were observed for naphthalene, 1,2,4-trichlorobenzene, and vinyl acetate in the CCV analyzed 10/31/07 08:20; these analytes met minimum response criteria, and affected data was qualified

CASE NARRATIVE

Laboratory number:	**198818**
Client:	**Mactec, Inc.**
Project:	**4084075115**
Location:	**Bldg 1065 Presidio**
Request Date:	**10/30/07**
Samples Received:	**10/30/07**

Volatile Organics by GC/MS (EPA 8260B) Water:

with "b". A number of analytes were detected between the MDL and the RL in the method blank for batch 131137; these analytes were not detected in the sample at or above the RL. Methylene chloride was detected between the MDL and the RL in 1065EX353RBEX354 (lab # 198818-008) and TRIP BLANK (lab # 198818-009); this analyte is a common laboratory contaminant. No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B) Soil:

5035 samples not analyzed within 48 hours were frozen. High responses were observed for a number of analytes in the CCV analyzed 11/05/07 12:29; these analytes were not detected at or above the RL in the associated samples, and affected data was qualified with "b". High response was observed for bromomethane in the CCV analyzed 10/31/07 09:15; this analyte was not detected at or above the RL in the associated samples. High response was observed for 1,2,4-trichlorobenzene in the CCV analyzed 11/01/07 13:28; this analyte was not detected at or above the RL in the associated method blank. Low response was observed for trichlorofluoromethane in the CCV analyzed 11/02/07 10:25; this analyte met minimum response criteria. Responses exceeding the instrument's linear range were observed for trichloroethene in the MS/MSD for batch 131189. High surrogate recoveries were observed for bromofluorobenzene in a number of samples, due to matrix interference. Acetone and methylene chloride were detected between the MDL and the RL in the method blanks for batch 131189, the method blank for batch 131245, and the method blank for batch 131351; these analytes were not detected in samples at or above the RL. Methylene chloride was detected between the MDL and the RL in many samples; this analyte is a common laboratory contaminant. 1065EX350[4.0] (lab # 198818-001), 1065EX352[4.0] (lab # 198818-004), 1065EX355[4.0] (lab # 198818-006), and DUP103007 (lab # 198818-002) were diluted due to high levels of hydrocarbons. 1065EX353[4.0] (lab # 198818-005) and 1065EX356[4.0] (lab # 198818-007) were not diluted; the low sample weight is due to 5035 packaging. No other analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM) Water:

Matrix spikes were not performed for this analysis due to insufficient sample volume. No analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM) Soil:

Matrix spikes were not reported for this analysis because the parent sample required a dilution that would have diluted out the spikes. High surrogate recoveries were observed for nitrobenzene-d5 in 1065EX350[4.0] (lab #

CASE NARRATIVE

Laboratory number:	**198818**
Client:	**Mactec, Inc.**
Project:	**4084075115**
Location:	**Bldg 1065 Presidio**
Request Date:	**10/30/07**
Samples Received:	**10/30/07**

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM) Soil:
198818-001), DUP103007 (lab # 198818-002), and 1065EX355[4.0] (lab # 198818-006), due to matrix interference. 1065EX353[4.0] (lab # 198818-005) was diluted due to high levels of non-target analytes. 1065EX350[4.0] (lab # 198818-001), DUP103007 (lab # 198818-002), and 1065EX355[4.0] (lab # 198818-006) were diluted due to the amber color of the sample extracts. 1065EX352[4.0] (lab # 198818-004) was diluted due to the dark and viscous nature of the sample extract. No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7470A) Water:
Silver, antimony, and zinc were detected between the MDL and the RL in the method blank for batch 131150; these analytes were not detected in the sample at or above the RL. No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A) Soil:
Low recoveries were observed for lead and antimony in the MS/MSD of 1065EX352[4.0] (lab # 198818-004); the BS/BSD were within limits, the associated RPDs were within limits, and the post digest spike was within limits. High recoveries were observed for copper and nickel; the BS/BSD were within limits, the associated RPDs were within limits, and the post digest spike was within limits. High % differences were observed for many analytes in the serial dilution of 1065EX352[4.0] (lab # 198818-004). Chromium, lead, and selenium were detected between the MDL and the RL in the method blank for batch 131130. No other analytical problems were encountered.

Moisture (ASTM D2216/CLP):
No analytical problems were encountered.

Subject: RE: 4084075115 - C&T Login Summary (198818) - Revisions to COCs and login

Three changes.
1) The client has indicated that these samples do not to need to be on rush, but standard TAT. The samples submitted today. I will call you later about this.
2)MACTEC sample ID for Lab sample 198818-008 change from EX353RB354 to 1065EX353RB354
3)MACTEC sample ID for lab sample 198818-009 change from TRIP BLANK to TB103007
Revised COC is attached.

I will follow up with additional changes in a separate e-mail as my scans of the COCs are so large

Also I have instructed the field persons to collect three Encore for TPHg and 3 Encore for VOCs.

As far as water analyses, I am assuming that three VOAs will be needed for TPHg and 3 VOAs for VOCs, let us know if fewer are necessary

Kristen will be speaking with you about this.

1) We were wondering if this sample could be incorporated into SDG 198818 and Level III not Level IV
2) Also the TAT is standard 1 week rather than 48 hours at the client's request.
3) We would like to change MACTEC sample ID from 1065EX354[4] to 1065EX354[4.0]

COOLER RECEIPT CHECKLIST

Login#: 198818 Date Received: 10-30-07 Number of Coolers: 1
Client: Mactec Project: Building 1065

A. Preliminary Examination Phase
Date Opened: 10-30-07 By (print): Faith Nichols (sign) Faith L

1. Did cooler come with a shipping slip (airbill, etc.)? ..... YES (NO)
   If YES, enter carrier name and airbill number: _____
2. Were custody seals on outside of cooler? ..... YES (NO)
   How many and where? _____ Seal date: _____ Seal name: _____
3. Were custody seals unbroken and intact at the date and time of arrival? ..... YES NO N/A
4. Were custody papers dry and intact when received? ..... (YES) NO
5. Were custody papers filled out properly (ink, signed, etc.)? ..... (YES) NO
6. Did you sign the custody papers in the appropriate place? ..... (YES) NO
7. Was project identifiable from custody papers? ..... (YES) NO
   If YES, enter project name at the top of this form.
8. Describe type of packing in cooler: Ziploc bags
9. If required, was sufficient ice used? Samples should be <=6 degrees C. ..... (YES) NO
   Type of ice: Wet Temperature: No temp blank, all cold
10. Were Encore sampling devices present in the cooler? ..... (YES) NO
    If YES, enter time they were transferred to the freezer 1630

B. Login Phase
Date Logged In: 10-30-07 By (print): Faith Nichols (sign) Faith L

1. Did all bottles arrive unbroken? ..... (YES) NO
2. Were labels in good condition and complete (ID, date, time, signature, etc.)? .. (YES) NO
3. Did bottle labels agree with custody papers? ..... (YES) NO
4. Were appropriate containers used for the tests indicated? ..... (YES) NO
5. Were correct preservatives added to samples? ..... (YES) NO
6. Was sufficient amount of sample sent for tests indicated? ..... (YES) NO
7. Were bubbles absent in VOA samples? If NO, list sample Ids below. ..... (YES) NO
8. Was the client contacted concerning this sample delivery? ..... YES NO
   If YES, give details below.
   Who was called? _____ By whom? _____ Date: _____

powder RCW 10/31/07 — RCW 10/31/07

Baked, solvent-rinsed granular Na2SO4 weighed out for QC samples
Samples were dried with CH2Cl2-rinsed powdered Na2SO4
1.0 mL of Surrogate solution was added to all samples
1.0 mL of Matrix Spiking solution was added to all spikes
≥ 75 mL of 1+1 (CH_2Cl_2+Acetone) was added to all
Samples were: ☐ sonicated 3 times ☒ placed on shaker table at:
Extracts filtered through baked, rinsed powdered Na_2SO_4
Concentrated to volumes as noted above
Relinquished to TEH Department

AD 10/03/07 : Sequence entry error - skipped file vj309.

AD 10/03/07 : ICAL restarted due to grouping start for fluorene.

AD 10/04/07 : Baseline of manual integration for nitrobenzene-d5 does not display in all spectal pages of ICAL files. Integrations of this compound are consistent and appropriate.

CASE NARRATIVE

Laboratory number:	**198879**
Client:	**Mactec, Inc.**
Project:	**4084075115**
Location:	**Bldg 1065 Presidio**
Request Date:	**11/01/07**
Samples Received:	**11/01/07**

This hardcopy data package contains sample and QC results for two water samples, requested for the above referenced project on 11/01/07. The samples were received on ice and intact.

Metals (EPA 6010B and EPA 7470A):
No analytical problems were encountered.

Total Cyanide (SM4500CN-E):
No analytical problems were encountered.

Total Oil & Grease (HEM) (EPA 1664A):
Matrix spikes were not performed for this analysis due to insufficient sample volume. No analytical problems were encountered.

Phenolic Compounds (EPA 420.1):
No analytical problems were encountered.

Dissolved Sulfide (SM4500S2-D):
No analytical problems were encountered.

pH (EPA 9040B):
No analytical problems were encountered.

If the metals results are really comparable, it probably wont make a difference. We can note it as a deviation. Kristen do you agree?

Hi Mary Jo,

They can't begin digesting it until tomorrow now. They may be able to prep it and run it in the same day. I will ask them to do that. I was afraid you might need 200.7 to discharge. The reality, though, is that the results obtained by 6010 will be comparable to what we will get using 200.7. I'll have the metals group jump on it first thing in the morning.

COOLER RECEIPT CHECKLIST

Login#: 198879 Date Received: 10-31-07 Number of Coolers: 1
Client: ~~Presidio~~ Mactec Project: Presidio

A. Preliminary Examination Phase
Date Opened: 10-31-07 By (print): Faith Nichols (sign) Faith

1. Did cooler come with a shipping slip (airbill, etc.)? ..... YES (NO)
If YES, enter carrier name and airbill number: _____
2. Were custody seals on outside of cooler? ..... YES (NO)
How many and where? _____ Seal date: _____ Seal name: _____
3. Were custody seals unbroken and intact at the date and time of arrival? ..... YES NO N/A
4. Were custody papers dry and intact when received? ..... (YES) NO
5. Were custody papers filled out properly (ink, signed, etc.)? ..... (YES) NO
6. Did you sign the custody papers in the appropriate place? ..... (YES) NO
7. Was project identifiable from custody papers? ..... (YES) NO
If YES, enter project name at the top of this form.
8. Describe type of packing in cooler: Wet Ice
9. If required, was sufficient ice used? Samples should be <=6 degrees C. ..... (YES) NO
Type of ice: Wet Temperature: No temp blank, all cold
10. Were Encore sampling devices present in the cooler? ..... (YES) NO
If YES, enter time they were transferred to the freezer 1600

B. Login Phase
Date Logged In: 11-1-07 By (print): Faith Nichols (sign) Faith

1. Did all bottles arrive unbroken? ..... (YES) NO
2. Were labels in good condition and complete (ID, date, time, signature, etc.)? ..... (YES) NO
3. Did bottle labels agree with custody papers? ..... (YES) NO
4. Were appropriate containers used for the tests indicated? ..... (YES) NO
5. Were correct preservatives added to samples? ..... (YES) NO
6. Was sufficient amount of sample sent for tests indicated? ..... (YES) NO
7. Were bubbles absent in VOA samples? If NO, list sample Ids below. ..... YES NO N/A
8. Was the client contacted concerning this sample delivery? ..... YES NO
If YES, give details below.
Who was called? _____ By whom? _____ Date: _____

CASE NARRATIVE

Laboratory number:	**198880**
Client:	**Mactec, Inc.**
Project:	**4084075115**
Location:	**Bldg 1065 Presidio**
Request Date:	**11/01/07**
Samples Received:	**11/01/07**

This hardcopy data package contains sample and QC results for two soil samples and two water samples, requested for the above referenced project on 11/01/07. The samples were received on ice and intact.

TPH-Purgeables and/or BTXE by GC (EPA 8015B) Water:
No analytical problems were encountered.

TPH-Purgeables and/or BTXE by GC (EPA 8015B) Soil:
5035 samples not analyzed within 48 hours were frozen. High surrogate recovery was observed for bromofluorobenzene (FID) in 1065EX357[4.0] (lab # 198880-001), due to interference from coeluting hydrocarbon peaks; the corresponding trifluorotoluene (FID) surrogate recovery was within limits. Gasoline C7-C12 was detected between the MDL and the RL in the method blank for batch 131365; this analyte was either not detected in samples at or above the RL, or detected at a level at least 10 times that of the blank. No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B) Water:
Matrix spikes were not performed for this analysis due to insufficient sample volume. No analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B) Soil:
Diesel C12-C24 was detected between the MDL and the RL in the method blank for batch 131317; this analyte was detected in the sample at a level at least 10 times that of the blank. No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B) Water:
Matrix spikes were not performed for this analysis due to insufficient sample volume. Many analytes were detected between the MDL and the RL in the method blank for batch 131331; these analytes were not detected in samples at or above the RL. Methylene chloride was detected between the MDL and the RL in TB103107 (lab # 198880-003) and 1065EX357RB358 (lab # 198880-004); this analyte is a common laboratory contaminant. Sample TB103107 (lab # 198880-003) had approximately 1 mL of headspace in the vial associated with reported results. No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B) Soil:
5035 samples not analyzed within 48 hours were frozen. High responses were observed for a number of analytes in the CCV analyzed 11/05/07 12:29; these analytes were not detected at or above the RL in the associated samples, and affected data was qualified with "b". Low response was observed for

Curtis & Tompkins, Ltd.

CASE NARRATIVE

Laboratory number:	**198880**
Client:	**Mactec, Inc.**
Project:	**4084075115**
Location:	**Bldg 1065 Presidio**
Request Date:	**11/01/07**
Samples Received:	**11/01/07**

Volatile Organics by GC/MS (EPA 8260B) Soil:
trichlorofluoromethane in the CCV analyzed 11/02/07 10:25; this analyte met minimum response criteria. High surrogate recoveries were observed for bromofluorobenzene in 1065EX357[4.0] (lab # 198880-001) and the MS/MSD of 1065EX352[4.0] (lab # 198818-004), due to matrix interference; these high surrogate recoveries were confirmed by re-analysis. Acetone and methylene chloride were detected between the MDL and the RL in the method blank for batch 131245; these analytes were not detected in the sample at or above the RL. Methylene chloride was detected between the MDL and the RL in 1065EX357[4.0] (lab # 198880-001) and 1065EX358[4.0] (lab # 198880-002); this analyte is a common laboratory contaminant. 1065EX357[4.0] (lab # 198880-001) was diluted due to high levels of hydrocarbons and high levels of non-target analytes. No other analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM) Water:
Matrix spikes were not performed for this analysis due to insufficient sample volume. No analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM) Soil:
1065EX357[4.0] (lab # 198880-001) and 1065EX358[4.0] (lab # 198880-002) were diluted due to the amber color of the sample extracts. No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7470A) Water:
Barium was detected between the MDL and the RL in the method blank for batch 131530; this analyte was not detected in the sample at or above the RL. No other analytical problems were encountered.

Metals (EPA 6010B and EPA 7471A) Soil:
Low recoveries were observed for antimony in the MS/MSD of 1065EX359[4.0] (lab # 198903-001); the BS/BSD were within limits, the associated RPD was within limits, and the post digest spike was within limits. High recoveries were observed for copper, lead, and zinc; the BS/BSD were within limits, the associated RPDs were within limits, and the post digest spike was within limits. High % difference was observed for beryllium in the serial dilution of 1065EX359[4.0] (lab # 198903-001). Many analytes were detected between the MDL and the RL in the method blank for batch 131284; these analytes were either not detected in samples at or above the RL, or detected at a level at least 10 times that of the blank. No other analytical problems were encountered.

COOLER RECEIPT CHECKLIST

Login#: 198880 Date Received: 10-31-07 Number of Coolers: 1
Client: ~~Presidio~~ Mactec Project: Presidio

A. Preliminary Examination Phase
Date Opened: 10-31-07 By (print): Faith Nichols (sign) Faith

1. Did cooler come with a shipping slip (airbill, etc.)? ..... YES (NO)
If YES, enter carrier name and airbill number: _____
2. Were custody seals on outside of cooler? ..... YES (NO)
How many and where? _____ Seal date: _____ Seal name: _____
3. Were custody seals unbroken and intact at the date and time of arrival? ..... YES NO N/A
4. Were custody papers dry and intact when received? ..... (YES) NO
5. Were custody papers filled out properly (ink, signed, etc.)? ..... (YES) NO
6. Did you sign the custody papers in the appropriate place? ..... (YES) NO
7. Was project identifiable from custody papers? ..... (YES) NO
If YES, enter project name at the top of this form.
8. Describe type of packing in cooler: Wet Ice
9. If required, was sufficient ice used? Samples should be <=6 degrees C. ..... (YES) NO
Type of ice: Wet Temperature: No temp blank, all cold
10. Were Encore sampling devices present in the cooler? ..... (YES) NO
If YES, enter time they were transferred to the freezer 1600

B. Login Phase
Date Logged In: ~~10~~ 11-1-07 By (print): Faith Nichols (sign) Faith

1. Did all bottles arrive unbroken? ..... (YES) NO
2. Were labels in good condition and complete (ID, date, time, signature, etc.)? ..... (YES) NO
3. Did bottle labels agree with custody papers? ..... (YES) NO
4. Were appropriate containers used for the tests indicated? ..... (YES) NO
5. Were correct preservatives added to samples? ..... (YES) NO
6. Was sufficient amount of sample sent for tests indicated? ..... (YES) NO
7. Were bubbles absent in VOA samples? If NO, list sample Ids below ..... (YES) NO
8. Was the client contacted concerning this sample delivery? ..... YES NO
If YES, give details below.
Who was called? _____ By whom? _____ Date: _____

	Mfg & Lot# / LIMS # / Time	Date/ Initials
0.5 mL of TEH_SURR was added to all samples	S7552B	DOT 11/5/07
0.5 mL of TEH_SP was added to all spikes	S7578A	
pH of all samples adjusted to pH ≤ 2 with H_2SO_4	FS073967	
☒ 3520c: Samples were continually extracted about 450 mL of CH_2Cl_2	EM47178	
Extraction Start Time:	1645	
Extraction End Time:	1045	DOT 11/6/07
☐ 3510c: Samples were extracted 3 times with 60 mL of CH_2Cl_2	NA	
Extracts filtered through baked, CH2Cl2-rinsed granular Na2SO4	EM47158737	
Concentrated to volumes as noted above	✓	
Relinquished to TEH Department	✓

	Mfg & Lot # / LIMS # / Time	Date/Initials
Baked, solvent-rinsed granular Na2SO4 weighed out for QC samples	EM47158737	KML 11/5/07
Samples were dried with CH2Cl2-rinsed powdered Na2SO4	EM47073734	
1.0 mL of Surrogate solution was added to all samples	57552B	
1.0 mL of Matrix Spiking solution was added to all spikes	57578A	
≥ 75 mL of 1+1 (CH_2Cl_2+Acetone) was added to all	CH_2Cl_2 EM47158	
	Acetone EM47156	
Samples were: ☐ sonicated 3 times ☒ placed on shaker table at:	1315 ~~0715~~ JM 11/6/07	
taken off shaker table at:	1515 ~~0740~~	
Extracts filtered through baked, rinsed powdered Na_2SO_4	EM47073734	KML 11/6/07
Concentrated to volumes as noted above	✓	
Relinquished to TEH Department	✓ HOOD	

Samples 198880-001, -002 shaken from 2300 11/5/07 to 0045 11/6/07 and 0715 to 0745 11/6/07 RFW 11/7/07
